CHIMERA INVESTMENT CORPORATION
 NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
 FOR THE QUARTER ENDED MARCH 31, 2009

 (unaudited)

1. Organization and Significant Accounting Policies

Chimera Investment Corporation, or the Company, was organized in Maryland on June 1, 2007. The Company commenced operations on November 21, 2007 when it completed its initial public offering. The Company has elected to be taxed as a real estate investment trust, or REIT, under the Internal Revenue Code of 1986, as amended. As long as the Company qualifies as a REIT, the Company will generally not be subject to U.S. federal or state corporate taxes on its income to the extent that the Company distributes at least 90% of its taxable net income to its stockholders. In July 2008, the Company formed Chimera Securities Holdings, LLC, a wholly-owned subsidiary. Chimera Securities Holdings, LLC is a

qualified REIT subsidiary used to hold residential mortgage-backed securities, or RMBS, for certain of the Company's securitizations. Annaly Capital Management, Inc., or Annaly, owns 8.6% of the Company's common shares. The Company is managed by Fixed Income Discount Advisory Company, or FIDAC, an investment advisor registered with the Securities and Exchange Commission. FIDAC is a wholly-owned subsidiary of Annaly.

A summary of the Company's significant accounting policies follows:

Basis of Presentation

The accompanying unaudited consolidated financial statements have been prepared in conformity with the instructions to Form 10-Q and Article 10, Rule 10-01 of Regulation S-X for interim financial statements. Accordingly, they may not include all of the information and footnotes required by accounting principles generally accepted in the United States of America, or GAAP. The consolidated interim financial statements are unaudited; however, in the opinion of the Company's management, all adjustments, consisting only of normal recurring accruals, necessary for a fair presentation of the financial position, results of operations, and cash flows have been included. These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements included in the Company's Annual Report on Form 10-K for the year ended December 31, 2008. The nature of the Company's business is such that the results of any interim period are not necessarily indicative of results for a full year. The consolidated financial statements include the accounts of the Company and its wholly-owned subsidiary, Chimera Securities Holdings, LLC. All intercompany balances and transactions have been eliminated.

Cash and Cash Equivalents

Cash and cash equivalents include cash on hand and money market funds.

Restricted Cash

Restricted cash includes cash held by counterparties as collateral for repurchase agreements and interest rate swaps.

Reverse Repurchase Agreements

The Company may invest its daily available cash balances via reverse repurchase agreements to provide additional yield on its assets. These investments will typically be recorded as short term investments, will mature daily, and are referred to as reverse repurchase agreements in the consolidated statement of financial condition. Reverse repurchase agreements are recorded at cost and are collateralized by RMBS.

6

Residential Mortgage-Backed Securities

The Company invests in RMBS representing interests in obligations backed by pools of mortgage loans and carries those securities at fair value estimated using a pricing model. Management reviews the fair values generated by the model to determine whether prices are reflective of the current market. Management performs a validation of the fair value calculated by the pricing model by comparing its results to independent prices provided by dealers in the securities and/or third party pricing services. If dealers or independent pricing services are unable to provide a price for an asset, or if the price provided by them is deemed unreliable by FIDAC, then the asset will be valued at its fair value as determined in good faith by FIDAC. In the current market, it may be difficult or impossible to obtain third party pricing on certain of the Company's investments. In addition, validating third party pricing for the Company's investments may be more subjective as fewer participants may be willing to provide this service to the Company. Moreover, the current market is more illiquid than in recent history for some of the investments the Company owns. Illiquid investments typically experience greater price volatility as a ready market does not exist. As volatility increases or liquidity decreases, the Company may have greater difficulty financing its investments which may negatively impact its earnings and the execution of its investment strategy. Please see Note 4 for a discussion of fair value measurement.

Statement of Financial Accounting Standards, or SFAS, No. 115, Accounting for Certain Investments in Debt and Equity Securities, requires the Company to classify its investment securities as either trading investments, available-for-sale investments or held-to-maturity investments. The Company intends to hold its RMBS as available-for-sale and as such may sell any of its RMBS as part of its overall management of its portfolio. All assets classified as available-for-sale are reported at estimated fair value, with unrealized gains and losses included in other comprehensive income.

Management evaluates the Company's assets for other-than-temporary impairment at least on a quarterly basis, and more frequently when economic or market concerns warrant such evaluation. Consideration is given to (1) the length of time and the extent to which the fair value has been lower than carrying value, (2) the financial condition and near-term prospects of the issuer, (3) credit quality and cash flow performance of the security, and (4) the intent and ability of the

Company to retain its investment in the security for a period of time sufficient to allow for any anticipated recovery in fair value. Unrealized losses on assets that are considered other than temporary, as measured by the amount of decline in fair value attributable to other-than-temporary factors, are recognized in income and the cost basis of the assets is adjusted.

RMBS transactions are recorded on the trade date. Realized gains and losses from sales of RMBS are determined based on the specific identification method and recorded as a gain (loss) on sale of investments in the statement of operations. Accretion of discounts or amortization of premiums on available-for-sale securities and mortgage loans is computed using the effective interest yield method and is included as a component of interest income in the statement of operations.

Securitized Loans Held for Investment

The Company's securitized residential mortgage loans are comprised of fixed-rate and variable-rate loans. The Company purchases pools of residential mortgage loans through a select group of originators. Mortgage loans are designated as held for investment, recorded on trade date, and are carried at their principal balance outstanding, plus any premiums or discounts which are amortized or accreted over the estimated life of the loan, less allowances for loan losses.

Allowance for Loan Losses

The Company has established an allowance for loan losses at a level that management believes is adequate based on an evaluation of known and inherent risks related to the Company's loan portfolio. The estimate is based on a variety of factors including current economic conditions, industry loss experience, the loan originator's loss experience, credit quality trends, loan portfolio composition, delinquency trends, national and local economic trends, national unemployment data, changes in housing appreciation or depreciation and whether specific geographic areas where the Company has significant loan

7

concentrations are experiencing adverse economic conditions and events such as natural disasters that may affect the local economy or property values. Upon purchase of the pools of loans, the Company obtained written representations and warranties from the sellers that the Company could be reimbursed for the value of the loan if the loan fails to meet the agreed upon origination standards. While the Company has little history of its own to establish loan trends, delinquency trends of the originators and the current market conditions aid in determining the allowance for loan losses. The Company also performed due diligence procedures on a sample of loans that met its criteria during the purchase process. The Company has created an unallocated provision for possible loan losses estimated as a percentage of the remaining principal on the loans. Management's estimate is based on historical experience of similarly underwritten pools.

When the Company determines it is probable that specific contractually due amounts are uncollectible, the amount is considered impaired. Where impairment is indicated, a valuation write-off is measured based upon the excess of the recorded investment over the net fair value of the collateral, reduced by selling costs. Any deficiency between the carrying amount of an asset and the net sales price of repossessed collateral is charged to the allowance for loan losses.

Securitized Debt

The Company has issued securitized debt to finance a portion of its residential mortgage loan portfolio. The securitizations are collateralized by residential adjustable or fixed rate mortgage loans that have been placed in a trust and pay interest and principal payments to the debt holders of that securitization. The Company's securitizations which are accounted for as financings under SFAS No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities ("SFAS 140"), are recorded as an asset called "Securitized loans" and the corresponding debt as "Securitized debt" in the consolidated statement of financial condition.

Fair Value Disclosure

SFAS No. 107, Disclosure About Fair Value of Financial Instruments, requires disclosure of the fair value of financial instruments for which it is practicable to estimate that value. The estimated fair value of mortgage-backed securities and interest rate swaps is equal to their carrying value presented in the consolidated statements of financial condition. Securitized loans are carried at amortized cost. The estimated fair value of cash and cash equivalents, accrued interest receivable, reverse repurchase agreements, mortgage-backed securities purchased, dividends payable, accounts payable, and accrued interest payable, generally approximates cost due to the short term nature of these financial instruments.

Interest Income

Interest income on RMBS and loans held for investment is recognized over the life of the investment using the effective interest method as described by SFAS No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, for securities of high credit quality and Emerging Issues Task Force ("EITF") No. 99-20, Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets, as amended by Staff Position ("FSP") EITF No. 99-20-1, for all other securities. Income recognition is suspended for loans when, in the opinion of management, a full recovery of income and principal becomes doubtful. Income recognition is resumed when the loan becomes contractually current and performance is demonstrated to be resumed.

Derivative Financial Instruments/Hedging Activity

The Company may hedge interest rate risk through the use of derivative financial instruments such as interest rate swaps. If the Company hedges using interest rate swaps it accounts for these instruments as free-standing derivatives. Accordingly, they are carried at fair value with realized and unrealized gains and losses recognized in earnings.

8

The Company accounts for derivative financial instruments in accordance with SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities ("SFAS 133"), as amended and interpreted. SFAS 133 requires an entity to recognize all derivatives as either assets or liabilities in the consolidated statement of financial condition and to measure those instruments at fair value. Additionally, the fair value adjustments affect either other comprehensive income in stockholders' equity until the hedged item is recognized in earnings or net income depending on whether the derivative instrument qualifies as a hedge for accounting purposes and, if so, the nature of the hedging activity.

Credit Risk

The Company retains the risk of potential credit losses on all of the non-Agency residential mortgage loans it owns as well as the residential mortgage loans which collateralize the RMBS it owns. The Company attempts to mitigate the risk of potential credit losses through its diligence in the asset selection process.

Mortgage Loan Sales and Securitizations

The Company periodically enters into transactions in which it sells financial assets, such as RMBS, mortgage loans and other assets. It may also securitize and re-securitize financial assets. These transactions are recorded in accordance with SFAS 140 Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities (SFAS 140) and are accounted for as either a "sale" and the loans held for investment are removed from the consolidated statements of financial condition or as a "financing" and are classified as "Securitized loans held for investment" on the Company's consolidated statements of financial condition, depending upon the structure of the securitization transaction. In these securitizations and re-securitizations the Company sometimes retains or acquires senior or subordinated interests in the securitized or re-securitized assets. Gains and losses on such securitizations or re-securitizations are recognized using the guidance in SFAS No. 140 which is based on a financial components approach that focuses on control. Under this approach, after a transfer of financial assets, an entity recognizes the financial and servicing assets it controls and the liabilities it has incurred, derecognizes financial assets when control has been surrendered, and derecognizes liabilities when extinguished.

The Company determines the gain or loss on sale of mortgage loans by allocating the carrying value of the underlying mortgage loans between securities or loans sold and the interests retained based on their fair values. The gain or loss on sale is the difference between the cash proceeds from the sale and the amount allocated to the securities or loans sold.

Income Taxes

The Company qualifies to be taxed as a REIT, and therefore it generally will not be subject to corporate federal or state income tax to the extent that qualifying distributions are made to stockholders and the REIT requirements, including certain asset, income, distribution and stock ownership tests are met. If the Company failed to qualify as a REIT and did not qualify for certain statutory relief provisions, the Company would be subject to federal, state and local income taxes and may be precluded from qualifying as a REIT for the subsequent four taxable years following the year in which the REIT qualification was lost.

The Company accounts for income taxes in accordance with SFAS No. 109, Accounting for Income Taxes, which requires the recognition of deferred income taxes for differences between the basis of assets and liabilities for financial statement and income tax purposes. Deferred tax assets and liabilities represent the future tax consequence for those differences, which will either be taxable or deductible when the assets and liabilities are recovered or settled. Deferred taxes are also recognized for operating losses that are available to offset

future taxable income. Valuation allowances are established when necessary to reduce deferred tax assets to the amount expected to be realized. In July 2006, the FASB issued FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 ("FIN 48"). FIN 48 clarifies the accounting for uncertainty in income taxes recognized in a company's financial statements and prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in an income tax return. FIN 48 also provides guidance on de-recognition, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 was effective for the Company upon inception and its effect was not material.

9

Net Income/Loss per Share

The Company calculates basic net income/loss per share by dividing net income/loss for the period by the weighted-average shares of its common stock outstanding for that period. Diluted net income/loss per share takes into account the effect of dilutive instruments, such as stock options, but uses the average share price for the period in determining the number of incremental shares that are to be added to the weighted average number of shares outstanding. The Company had no potentially dilutive securities outstanding during the periods presented.

Stock-Based Compensation

The Company accounts for stock-based compensation in accordance with the provisions of SFAS No. 123R, Accounting for Stock-Based Compensation, which establishes accounting and disclosure requirements using fair value based methods of accounting for stock-based compensation plans. Compensation expense related to grants of stock and stock options is recognized over the vesting period of such grants based on the estimated fair value on the grant date.

Stock compensation awards granted by Chimera to the employees of FIDAC are accounted for in accordance with EITF 96-18, Accounting for Equity Instruments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods and Services, which requires the Company to measure the fair value of the equity instrument using the stock prices and other measurement assumptions as of the earlier of either the date at which a performance commitment by the counterparty is reached or the date at which the counterparty's performance is complete.

Use of Estimates

The preparation of the financial statements in conformity with generally accepted accounting principles or (GAAP) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Recent Accounting Pronouncements

In February 2008, the Financial Accounting Standards Board ("FASB") issued FSP No. SFAS 140-3 Accounting for Transfers of Financial Assets and Repurchase Financing Transactions, ("FSP SFAS 140-3"). FSP SFAS 140-3 addresses whether transactions where assets purchased from a particular counterparty and financed through a repurchase agreement with the same counterparty can be considered and accounted for as separate transactions, or are required to be considered "linked" transactions and may be considered derivatives under SFAS 133. FSP SFAS 140-3 requires purchases and subsequent financing through repurchase agreements be considered linked transactions unless all of the following conditions apply: (1) the initial purchase and the use of repurchase agreements to finance the purchase are not contractually contingent upon each other; (2) the repurchase financing entered into between the parties provides full recourse to the transferee and the repurchase price is fixed; (3) the financial assets are readily obtainable in the market; and (4) the financial instrument and the repurchase agreement are not coterminous. This FSP is effective for the Company as of January 1, 2009. The Company meets the requirements of this FSP to treat repurchase financings as non-linked transactions and this FSP has no effect on financial reporting.

In June 2008, the FASB proposed amending SFAS 140 and FASB Interpretation No. 46, Consolidation of Variable Interest Entities (revised December 2003) ("FIN 46R"). This was due to increased scrutiny of these accounting pronouncements by the Securities and Exchange Commission (the "SEC"), Congress and financial statement users in the wake of recent deterioration in the credit markets. The proposed amendments would eliminate the Qualified Special Purpose Entity (QSPE) in SFAS 140, and modify the consolidation model in FIN 46(R). QSPEs are utilized

10

extensively by many financial firms in securitizations for off-balance sheet financing for "sale accounting" treatment in the transfer of financial assets. Currently, QSPEs do not have to be consolidated on the issuing firm's financial

statements. Should the proposed changes to SFAS 140 become final, enterprises involved with QSPEs will no longer be exempt from applying FIN 46(R), the FASB Interpretation on consolidation; thus, previously unconsolidated entities may have to be consolidated. The revisions will also eliminate the provision in paragraph 9(b) of SFAS 140 that allowed entities to "look-through" to the rights of beneficial interest holders when analyzing control. Further, the revisions will address the de-recognition of assets and amend the criteria for said de-recognition; and require that the beneficial interests received by a transferor, in connection with a sale of an entire financial asset to an entity that is not consolidated by the transferor, be considered proceeds of the sale and initially measured at fair value. This amendment is currently being redeliberated by the FASB.

In December 2008, the FASB issued a staff position entitled FSP SFAS 140-4 and FIN 46(R)-8 (FSP). The FSP amends both SFAS 140 and FIN 46R, to require public entities to provide additional disclosures about the transfer of financial assets and involvement with variable interest entities (including qualifying special purpose entities or QSPE), respectively. The intent of the disclosure requirements is to provide greater transparency to financial statement users about an enterprise's continuing involvement with financial assets after they have been transferred in a securitization or asset-backed financing arrangement (SFAS 140); and to demonstrate how an enterprise's involvement with a variable interest entity (VIE) affects its financial position, financial performance and cash flows (FIN 46(R)). The Company sponsored two securitizations during 2008 and two during the first quarter of 2009. The first was accounted for as a financing, and all other securitizations were accounted for as sales. Additionally, the Company is involved in asset-backed financing arrangements in the form of repurchase agreements and reverse repurchase agreements; therefore it is directly affected by the FSP. The implementation of this FSP increased disclosures regarding the Company's assets and liabilities, which are included in Note 4. This FSP was effective for the Company on December 31, 2008.

In September 2006, the FASB issued SFAS No. 157, Fair Value Measurements ("SFAS 157"). SFAS 157 defines fair value, establishes a framework for measuring fair value and requires enhanced disclosures about fair value measurements. SFAS 157 requires companies to disclose the fair value of its financial instruments according to a fair value hierarchy (i.e., levels 1, 2, and 3, as defined). Additionally, companies are required to provide enhanced disclosure regarding instruments in the level 3 category (which require significant management judgment), including a reconciliation of the beginning and ending balances separately for each major category of assets and liabilities. SFAS 157 was adopted by the Company on January 1, 2008. SFAS 157 did not significantly impact the manner in which management estimates fair value, but it required additional disclosures, which are included in Note 4.

In October 2008, FASB issued FSP 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active ("FSP 157-3"), in response to the deterioration of the credit markets. This FSP provides guidance clarifying how SFAS 157, should be applied when valuing securities in markets that are not active. The guidance provides an illustrative example that applies the objectives and framework of SFAS 157, utilizing management's internal cash flow and discount rate assumptions when relevant observable data do not exist. It further clarifies how observable market information and market quotes should be considered when measuring fair value in an inactive market. It reaffirms the notion of fair value as an exit price as of the measurement date and that fair value analysis is a transactional process and should not be broadly applied to a group of assets. FSP 157-3 was effective upon issuance including prior periods for which financial statements have not been issued. The implementation of FSP 157-3 did not have a material effect on the fair value of the Company's assets as the Company intends to continue the methodologies used in previous quarters to value assets as defined under the original SFAS 157.

On October 3, 2008 the Emergency Economic Stabilization Act of 2008 (the "EESA") was signed into law. Section 133 of the EESA mandated that the SEC conduct a study on mark-to-market accounting standards. The SEC provided its study to the US Congress on December 30, 2008. Part of the recommendations within the study indicated that "fair value requirements should be improved through development of application and best practices guidance for determining fair value in illiquid or inactive markets". As a result of this study and the recommendations therein, on April 9, 2009, the FASB issued Staff Position (FSP) 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or

Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly. This FSP provides additional guidance on determining fair value when the volume and level of activity for the asset or liability have significantly decreased when compared with normal market activity for the asset or liability (or similar assets or liabilities). The FSP gives specific factors to evaluate if there has been a decrease in normal market activity and if so, provides a methodology to analyze transactions or quoted prices and make necessary adjustments to fair value in accordance with Statement 157. The objective is to determine the point within a range of fair value estimates that is most representative of fair value under current market conditions. FSP 157-4 is effective for the Company for interim and annual reporting periods ending after

June 15, 2009. The Company does not foresee FSP 157-4 having a material impact on the manner in which the Company estimates fair value, nor does it expect material increases in current disclosures.

Additionally, in conjunction with FSP 157-4, the FASB issued FAS 115-2 and FAS 124-2, Recognition and Presentation of Other Than Temporary Impairments. The objective of the new guidance is to make impairment guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments (OTTI) on debt and equity securities in financial statements. This, too, was as a result of the SEC mark-to-market study mandated under the EESA. The SEC's recommendation was to "evaluate the need for modifications (or the elimination) of current OTTI guidance to provide for a more uniform system of impairment testing standards for financial instruments." The new guidance revises the OTTI evaluation methodology. Previously the analytical focus was on whether the entity had the "intent and ability to retain its investment in the debt security for a period of time sufficient to allow for any anticipated recovery in fair value." Now the focus is on whether the entity has the "intent to sell the debt security or, more likely than not, will be required to sell the debt security before its anticipated recovery." Further, the security is analyzed for credit loss (the difference between the present value of cash flows expected to be collected and the amortized cost basis). If the company does not intend to sell the debt security, nor will be required to sell the debt security prior to its anticipated recovery, the credit loss, if any, will be recognized in the statement of earnings, while the balance of impairment related to other factors will be recognized in Other Comprehensive Income (OCI). If the company intends to sell the security, or will be required to sell the security before its anticipated recovery, the full OTTI will be recognized in the statement of earnings. FAS 115-2 and FAS 124-2 are effective for the Company for all interim and annual periods ending after June 15, 2009. We expect that adoption of these rules will increase footnote disclosure and may result in a cumulative effect adjustment to retained earnings in the period of adoption. In February 2007, the FASB issued SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities, ("SFAS 159"). SFAS 159 permits entities to choose to measure many financial instruments and certain other items at fair value. Unrealized gains and losses on items for which the fair value option has been elected will be recognized in earnings at each subsequent reporting date. SFAS 159 became effective for the Company January 1, 2008. The Company did not elect the fair value option for any existing eligible financial instruments.

In March 2008, the FASB issued SFAS No. 161, ("SFAS 161"), Disclosures about Derivative Instruments and Hedging Activities, an amendment of FASB Statement No. 133. SFAS 161 attempts to improve the transparency of financial reporting by providing additional information about how derivative and hedging activities affect an entity's financial position, financial performance and cash flows. This statement changes the disclosure requirements for derivative instruments and hedging activities by requiring enhanced disclosure about (1) how and why an entity uses derivative instruments, (2) how derivative instruments and related hedged items are accounted for under SFAS Statement 133 and its related interpretations, and (3) how derivative instruments and related hedged items affect an entity's financial position, financial performance, and cash flows. To meet these objectives, SFAS 161 requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value amounts of gains and losses on derivative instruments, and disclosures about credit-risk-related contingent features in derivative agreements. This disclosure framework is intended to better convey the purpose of derivative use in terms of the risks that an entity is intending to manage. SFAS 161 was effective and adopted by the Company on January 1, 2009. The adoption of SFAS 161 will increase footnote disclosure when the Company engages in hedging activities.

In January 2009, the FASB issued EITF Staff Position No EITF 99-20-1, "Amendments to the Impairment Guidance of EITF Issue 99-20". EITF 99-20-1 was issued in an effort to provide a more consistent determination on whether an

other-than-temporary impairment has occurred for certain beneficial interests in securitized financial assets. Other-than-temporary impairment has occurred if there has been an adverse change in future estimated cash flow and its impact reflected in current earnings. The determination cannot be overcome by management judgment of the probability of collecting all cash flows previously projected. For debt securities that are not within the scope of EITF 99-20-1, Statement 115 continues to apply. The objective of other-than-temporary impairment analysis is to determine whether it is probable that the holder will realize some portion of the unrealized loss on an impaired security. Factors to consider when making an other-than-temporary impairment decision include information about past events, current conditions, reasonable and supportable forecasts, remaining payment terms, financial condition of the issuer, expected defaults, value of underlying collateral, industry analysis, sector credit rating, credit enhancement, and financial condition of guarantor. The Company's non-Agency RMBS investments fall under the guidance of this EITF and as such the Company assesses each security for other-than-temporary impairments based on estimated future cash flows. This EITF became effective for the Company on December 31, 2008.

On April 9, 2009, the FASB also issued FSP FAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments. The FSP requires disclosures about fair value of financial instruments for interim reporting periods as well as in annual financial statements. This will be effective for the Company June 30, 2009. The adoption of FSP FAS 107-1 and APB 28-1 will increase footnote disclosure.

2. Mortgage-Backed Securities

The following table represents the Company's available for sale RMBS portfolio as of March 31, 2009 and December 31, 2008, at fair value.

	<C> March 31, 2009	<C> December 31, 2008
(dollars in thousands)		
Mortgage-Backed securities, at amortized cost	\$1,342,497	\$1,122,135
Gross unrealized gain	9,504	7,700
Gross unrealized loss	(266,209)	(274,368)
Fair value	\$1,085,792	\$ 855,467

</TABLE>

During the quarter ended March 31, 2009, the Company completed sales of RMBS with a carrying value of \$544.8 million which resulted in a realized gain of approximately \$3.6 million. During the quarter ended December 31, 2008 the Company had no sales of investments.

The following table presents the gross unrealized losses and estimated fair value of the Company's RMBS by length of time that such securities have been in a continuous unrealized loss position at March 31, 2009 and December 31, 2008.

	<C>		<C>		<C> Total Estimated Fair Value
	Less than 12 Months Estimated Fair Value	Unrealized Losses	Unrealized Loss Estimated Fair Value	Position For: 12 Months or More Unrealized Losses	
(dollars in thousands)					
March 31, 2009 (\$266,209)	\$238,249	(\$ 58,308)	\$470,978	(\$207,901)	\$709,227
December 31, 2008 (\$274,368)	\$855,467	(\$274,368)	\$ -	\$ -	\$855,467

</TABLE>

The Company's investments are not considered other-than-temporarily impaired because the Company has assessed the securities using cash flow modeling to determine if principal impairment has occurred and the Company currently has the ability and intent to hold the investments to maturity or for a period of time sufficient for a forecasted market price recovery up to or beyond the cost of the investments.

13

Actual maturities of mortgage-backed securities are generally shorter than stated contractual maturities. Actual maturities of the Company's RMBS are affected by the contractual lives of the underlying mortgages, periodic payments of principal and prepayments of principal.

The following tables summarize the Company's RMBS at March 31, 2009 and December 31, 2008 according to their estimated weighted-average life classifications:

Average Weighted Average Life	<C> March 31, 2009 (dollars in thousands)		<C> Weighted Coupon
	Fair Value	Amortized Cost	
Less than one year	\$ -	\$ -	-
Greater than one year and less than five years	909,005	1,116,722	6.07%
Greater than five years	176,787	225,775	6.03%
Total	\$1,085,792	\$1,342,497	6.07%

December 31, 2008
(dollars in thousands)

Average Weighted Average Life	Fair Value	Amortized Cost	Weighted Coupon
Less than one year	\$ -	\$ -	-
Greater than one year and less than five years	768,163	975,835	6.05%
Greater than five years	87,304	146,300	6.56%
Total	\$855,467	\$1,122,135	6.12%

</TABLE>

The weighted-average lives of the mortgage-backed securities as of March 31, 2009 and December 31, 2008 in the tables above are based on data provided through dealer quotes, assuming constant prepayment rates to the balloon or reset date for each security. The prepayment model considers current yield, forward yield, steepness of the curve, current mortgage rates, mortgage rates of the outstanding loan, loan age, margin and volatility.

In March 2009, the Company sponsored a \$281.9 million re-securitization whereby it re-securitized certain residential mortgage-backed securities it owned. In this transaction, the Company initially retained all of the securities issued by the securitization trust including approximately \$89.4 million in subordinated bonds and \$192.5 million of AAA-rated fixed and hybrid senior bonds. Pursuant to FAS 140, this transaction was accounted for as a sale.

In January 2009, the Company sponsored a \$140.4 million re-securitization whereby it re-securitized certain residential mortgage-backed securities it owned. Concurrent with the settlement of this transaction, the Company sold approximately \$139.4 million of the AAA-rated fixed senior bonds to third-party investors and retained approximately \$1.0 million in AAA-rated fixed senior bonds and a fixed rate IO. Pursuant to FAS 140, the transaction with the third party was accounted for as a sale.

3. Securitized Loans Held for Investment

The following table represents the Company's securitized residential mortgage loans classified as held for investment at March 31, 2009 and December 31, 2008. At March 31, 2009 approximately 56.0% of the Company's securitized loans are adjustable rate mortgage loans and 44.0% are fixed rate mortgage loans. All of the adjustable rate loans held for investment are hybrid ARMs. Hybrid ARMs are mortgages that have interest rates that are fixed for an initial period (typically three, five, seven or 10 years) and thereafter reset at regular intervals subject to interest rate caps. The loans held for investment are carried at their principal balance outstanding less an allowance for loan losses:

14

<TABLE>
<CAPTION>
<S>

	March 31, 2009	December 31, 2008
(dollars in thousands)		
Securitized mortgage loans, at principal balance	\$567,750	\$584,967
Less: allowance for loan losses	1,855	1,621
Securitized mortgage loans held for investment	\$565,895	\$583,346

</TABLE>

The following table summarizes the changes in the allowance for loan losses for the securitized mortgage loan portfolio during the quarters ended March 31, 2009 and December 31, 2008:

	March 31, 2009	December 31, 2008
(dollars in thousands)		
Balance, beginning of period	\$1,621	\$ 681
Provision for loan losses	234	940
Charge-offs	-	-
Balance, end of period	\$1,855	\$1,621

On a quarterly basis, the Company evaluates the adequacy of its allowance for

loan losses. The Company's allowance for loan losses for the quarter ended March 31, 2009 was \$1.9 million, representing 33 basis points of the principal balance of the Company's securitized mortgage loan portfolio. The Company's allowance for loan losses was \$1.6 million for the year ended December 31, 2008, representing 28 basis points of the principal balance of the Company's securitized loan portfolio.

4. Fair Value Measurements

SFAS 157 defines fair value, establishes a framework for measuring fair value, establishes a three-level valuation hierarchy for disclosure of fair value measurement and enhances disclosure requirements for fair value measurements. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows:

Level 1 - inputs to the valuation methodology are quoted prices (unadjusted) for identical assets and liabilities in active markets.

Level 2 - inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.

Level 3 - inputs to the valuation methodology are unobservable and significant to fair value.

Mortgage-Backed Securities and interest rate swaps are valued using a pricing model. The MBS pricing model incorporates such factors as coupons, prepayment speeds, spread to the US Department of Treasury, or the Treasury, and swap curves, convexity, duration, periodic and life caps, and credit enhancement. Interest rate swaps are modeled by incorporating such factors as the Treasury curve, LIBOR rates, and the receive rate on the interest rate swap. Management reviews the fair values determined by the pricing model and compares its results to dealer quotes received on investments to validate reasonableness of the valuations indicated by the pricing model. The dealer quotes incorporate common market pricing methods, including a spread measurement to the Treasury curve or interest rate swap curve as well as underlying characteristics of the particular security including coupon, periodic and life caps, rate reset period, issuer, additional credit support and expected life of the security.

Any changes to the valuation methodology are reviewed by management to ensure the changes are appropriate. As markets and products develop and the pricing for certain products becomes more transparent, we continue to refine our valuation methodologies. The methods used may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values.

15

Furthermore, while the Company believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies, or assumptions, to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. The Company uses inputs that are current as of the measurement date, which may include periods of market dislocation, during which price transparency may be reduced.

At March 31, 2009 and December 31, 2008, the Company has classified its RMBS as "Level 2".

The Company's financial assets and liabilities carried at fair value on a recurring basis are valued at March 31, 2009 as follows:

<TABLE>
<CAPTION>
<S>

	Level 1	<C> Level 2	Level 3
	(dollars in thousands)		

Assets:			
Mortgage-Backed Securities	-	\$1,085,792	-

</TABLE>

As fair value is not an entity specific measure and is a market based approach which considers the value of an asset or liability from the perspective of a market participant, observability of prices and inputs can vary significantly from period to period. During times of market dislocation, as has been experienced during the recent months, the observability of prices and inputs can be reduced for certain instruments. A condition such as this can cause instruments to be reclassified from level 1 to level 2 or level 2 to level 3 when the Company is unable to obtain third party pricing verification. As of the quarter ended March 31, 2009, the Company was able to obtain third party pricing verification for all assets classified as level 2. The classification of assets and liabilities by level remains unchanged at March 31, 2009, when compared to the previous quarter.

5. Repurchase Agreements

Residential Mortgage-Backed Securities

The Company had outstanding \$559.9 million and \$562.1 million of repurchase agreements with weighted average borrowing rates of 1.78% and 1.43% and weighted average remaining maturities of 5 and 2 days as of March 31, 2009 and December 31, 2008, respectively. At March 31, 2009 and December 31, 2008, RMBS pledged as collateral under these repurchase agreements had an estimated fair value of \$645.1 million and \$680.8 million, respectively. The interest rates of these repurchase agreements are generally indexed to the one-month LIBOR rate and re-price accordingly.

At March 31, 2009 and December 31, 2008, the repurchase agreements collateralized by RMBS had the following remaining maturities:

	March 31, 2009	December 31, 2008
(dollars in thousands)		
Within 30 days	\$559,926	\$562,119
30 to 59 days	-	-
60 to 89 days	-	-
90 to 119 days	-	-
Greater than or equal to 120 days	-	-
Total	\$559,926	\$562,119

At March 31, 2009, and December 31, 2008 the Company had an amount at risk of approximately 18% and 29%, respectively, of its equity with Annaly, an affiliate.

6. Securitized Debt

All of the Company's securitized debt is collateralized by residential mortgage loans. For financial reporting purposes, the Company's securitized debt is accounted for as a financing pursuant to SFAS 140. Thus, the residential mortgage loans held as collateral are recorded in the assets of the Company as securitized loans and the securitized debt is recorded as a liability in the statement of financial condition.

The following table presents the estimated principal repayment schedule of the securitized debt held in bankruptcy remote entities outstanding at March 31, 2009 and December 31, 2008:

	March 31, 2009	December 31, 2008
Within One Year	\$49,232	\$65,561
One to Three Years	85,945	112,745
Three to Five Years	70,371	85,955
Greater Than or Equal to Five Years	289,278	246,535
Total	\$494,826	\$510,796

Maturities of the Company's securitized debt are dependent upon cash flows received from the underlying loans receivable. The estimate of their repayment is based on scheduled principal payments on the underlying loans receivable. This estimate will differ from actual amounts to the extent prepayments and/or loan losses are experienced.

The following table presents the carrying amount and estimated fair value of the Company's securitized debt at March 31, 2009 and December 31, 2008:

	March 31, 2009		December 31, 2008	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Securitized Debt	\$473,168	\$494,826	\$488,743	\$510,796
Total	\$473,168	\$494,826	\$488,743	\$510,796

As of March 31, 2009 and December 31, 2008, the Company had no off balance sheet credit risk.

At March 31, 2009, the securitized debt collateralized by residential mortgage loans had a principal balance of \$473.2 million. The debt matures between the years 2023 and 2038. At March 31, 2009, the debt carried a weighted average cost of financing equal to 5.58%, of which approximately 44% of the remaining principal balance is a fixed rate at 6.32% and 56% of the remaining principal balance is at a variable rate of 5.65%. At December 31, 2008, securitized debt collateralized by residential mortgage loans had a principal balance of \$488.7 million. At December 31, 2008, the debt carried a weighted average cost of financing equal to 5.55%, of which approximately 44% of the remaining principal balance is a fixed rate at 6.33% and 56% of the remaining principal balance at a variable rate of 5.65%.

7. Common Stock

The Company's charter provides that it may issue up to 550,000,000 shares of stock, consisting of up to 500,000,000 shares of common stock having a par value of \$0.01 per share and up to 50,000,000 shares of preferred stock having a par value of \$0.01 per share. During the quarter ended March 31, 2009, the Company declared dividends to common shareholders totaling \$10.6 million or \$0.06 per share, which were paid on April 29, 2009.

On April 15, 2009 the Company announced the sale of 235,000,000 shares of common stock at \$3.00 per share for estimated proceeds, less the underwriters' discount and offering expenses, of \$674.8 million. Immediately following the sale of these shares Annaly purchased 24,955,752 shares at the same price per share as the public offering, for proceeds of approximately \$74.9 million. In addition, on April 16, 2009 the underwriters exercised the option to purchase up to an additional 35,250,000 shares of common stock to cover over-allotments for proceeds, less the underwriters' discount, of approximately \$101.3 million. These sales were completed on April 21, 2009. In all, the Company raised net proceeds of approximately \$851.0 in these offerings.

17

There was no preferred stock issued or outstanding as of March 31, 2009 or December 31, 2008.

8. Long Term Incentive Plan

The Company has adopted a long term stock incentive plan to provide incentives to its independent directors and employees of FIDAC and its affiliates, to stimulate their efforts towards the Company's continued success, long-term growth and profitability and to attract, reward and retain personnel and other service providers. The incentive plan authorizes the Compensation Committee of the board of directors to grant awards, including incentive stock options, non-qualified stock options, restricted shares and other types of incentive awards. The incentive plan authorizes the granting of options or other awards for an aggregate of the greater of 8.0% of the outstanding shares of the Company's common stock, or 14,175,776 shares, up to a ceiling of 40,000,000 shares.

On January 2, 2008, the Company granted restricted stock awards in the amount of 1,301,000 shares to FIDAC's employees and the Company's independent directors. The awards to the independent directors vested on the date of grant and the awards to FIDAC's employees vest quarterly over a period of 10 years. Of these shares, as of March 31, 2009, 173,125 shares have vested and 19,147 shares were forfeited or cancelled. During the three months ended March 31, 2009, 32,225 shares vested and 1,267 shares were forfeited.

A summary of the status of the Company's non-vested shares as of March 31, 2009, and changes during the quarter ended March 31, 2009, is presented below:

Non-vested	Shares	Weighted Average Grant Date Fair Value

Non-vested at December 31, 2008	1,160,100	\$ 17.72
Granted	-	-
Vested	32,225	\$3.36
Forfeited	1,267	\$3.36

Non-vested at March 31, 2009	1,127,875	\$17.72
=====		

As of March 31, 2009, there was \$20.0 million of total unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the long term incentive plan. That cost is expected to be recognized over a weighted-average period of 9 years. The total fair value of shares vested during the quarter ended March 31, 2009 was \$108,276.

9. Income Taxes

As a REIT, the Company is not subject to Federal income tax on earnings distributed to its shareholders. Most states recognize REIT status as well. The Company has decided to distribute the majority of its income. During the

quarters ended March 31, 2009 and 2008, respectively, the Company recorded income tax expense of \$1,200 and \$2,813 related to state and federal tax liabilities on undistributed income.

10. Credit Risk and Interest Rate Risk

The Company's primary components of market risk are credit risk and interest rate risk. The Company is subject to credit risk in connection with its investments in residential mortgage loans and credit sensitive mortgage-backed

18

securities. When the Company assumes credit risk, it attempts to minimize interest rate risk through asset selection, hedging and matching the income earned on mortgage assets with the cost of related liabilities. The Company is subject to interest rate risk, primarily in connection with its investments in fixed-rate and adjustable-rate mortgage-backed securities, residential mortgage loans, and borrowings under repurchase agreements. The Company attempts to minimize credit risk through due diligence and asset selection. The Company's strategy is to purchase loans underwritten to agreed-upon specifications of selected originators in an effort to mitigate credit risk. The Company has established a whole loan target market including prime borrowers with FICO scores generally greater than 650, Alt-A documentation, geographic diversification, owner-occupied property, and moderate loan to value ratio. These factors are considered to be important indicators of credit risk.

11. Management Agreement and Related Party Transactions

The Company has entered into a management agreement with FIDAC, which provides for an initial term through December 31, 2010 with automatic one-year extension options and subject to certain termination rights. The Company pays FIDAC a quarterly management fee equal to 1.75% per annum of the gross Stockholders' Equity (as defined in the management agreement) of the Company. Management fees accrued and subsequently paid to FIDAC for the quarter ending March 31, 2009 was \$2.6 million. At December 31, 2008, quarterly management fees in the amount of \$2.3 million were accrued and subsequently paid to FIDAC.

On October 13, 2008, the Company and FIDAC amended the management agreement to reduce the base management fee from 1.75% per annum to 1.50% per annum of the Company's stockholders' equity and provide that the incentive fees may be in cash or shares of the Company's common stock, at the election of the Company's board of directors.

On October 19, 2008, the Company and FIDAC further amended the management agreement to provide that the incentive fee be eliminated in its entirety and FIDAC receive only the management fee of 1.50% per annum of the Company's stockholders' equity.

The Company is obligated to reimburse FIDAC for its costs incurred under the management agreement. In addition, the management agreement permits FIDAC to require the Company to pay for its pro rata portion of rent, telephone, utilities, office furniture, equipment, machinery and other office, internal and overhead expenses of FIDAC incurred in the operation of the Company. These expenses are allocated between FIDAC and the Company based on the ratio of the Company's proportion of gross assets compared to all remaining gross assets managed by FIDAC as calculated at each quarter end. FIDAC and the Company will modify this allocation methodology, subject to the Company's board of directors' approval if the allocation becomes inequitable (i.e., if the Company becomes very highly leveraged compared to FIDAC's other funds and accounts). FIDAC has waived its right to request reimbursement from the Company of these expenses until such time as it determines to rescind that waiver.

During the quarter ended March 31, 2009, 32,225 shares of restricted stock issued by the Company to FIDAC's employees vested, as discussed in Note 8.

In March 2008, the Company entered into a RMBS repurchase agreement and a receivables sales agreement with Annaly. These agreements contain customary representations, warranties and covenants. As of March 31, 2009, the Company was financing \$452.5 million under this agreement.

12. Commitments and Contingencies

From time to time, the Company may become involved in various claims and legal actions arising in the ordinary course of business. Management is not aware of any reported or unreported contingencies at March 31, 2009.

13. Subsequent Events

19

On April 15, 2009 the Company announced the sale of 235,000,000 shares of common stock at \$3.00 per share for estimated proceeds, less the underwriters' discount and offering expenses, of \$674.8 million. Immediately following the sale of these shares Annaly purchased 24,955,752 shares at the same price per share as the public offering, for proceeds of approximately \$74.9 million. In addition,

on April 16, 2009 the underwriters exercised the option to purchase up to an additional 35,250,000 shares of common stock to cover over-allotments for proceeds, less the underwriters' discount, of approximately \$101.3 million. These sales were completed on April 21, 2009. In all, the Company raised net proceeds of approximately \$851.0 million in these offerings.

20

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS

OF OPERATIONS

Special Note Regarding Forward-Looking Statements

We make forward-looking statements in this report that are subject to risks and uncertainties. These forward-looking statements include information about possible or assumed future results of our business, financial condition, liquidity, results of operations, plans and objectives. When we use the words "believe," "expect," "anticipate," "estimate," "plan," "continue," "intend," "should," "may," "would," "will" or similar expressions, we intend to identify forward-looking statements. Statements regarding the following subjects, among others, are forward-looking by their nature:

- o our business and investment strategy;
- o our projected financial and operating results;
- o our ability to maintain existing financing arrangements, obtain future financing arrangements and the terms of such arrangements;
- o general volatility of the securities markets in which we invest;
- o the implementation, timing and impact of, and changes to, various government programs, including the US Department of the Treasury's plan to buy Agency residential mortgage-backed securities, the Term Asset-Backed Securities Loan Facility and the Public-Private Investment Program;
- o our expected investments;
- o changes in the value of our investments;
- o interest rate mismatches between our mortgage-backed securities and our borrowings used to fund such purchases;
- o changes in interest rates and mortgage prepayment rates;
- o effects of interest rate caps on our adjustable-rate mortgage-backed securities;
- o rates of default or decreased recovery rates on our investments;
- o prepayments of the mortgage and other loans underlying our mortgage-backed or other asset-backed securities;
- o the degree to which our hedging strategies may or may not protect us from interest rate volatility;
- o impact of and changes in governmental regulations, tax law and rates, accounting guidance, and similar matters;
- o availability of investment opportunities in real estate-related and other securities;
- o availability of qualified personnel;

21

- o estimates relating to our ability to make distributions to our stockholders in the future;
- o our understanding of our competition; and
- o market trends in our industry, interest rates, the debt securities markets or the general economy.

The forward-looking statements are based on our beliefs, assumptions and expectations of our future performance, taking into account all information currently available to us. You should not place undue reliance on these forward-looking statements. These beliefs, assumptions and expectations can change as a result of many possible events or factors, not all of which are known to us. Some of these factors are described under the caption "Risk

Factors" in our most recent Annual Report on Form 10-K and any subsequent Quarterly Reports on Form 10-Q. If a change occurs, our business, financial condition, liquidity and results of operations may vary materially from those expressed in our forward-looking statements. Any forward-looking statement speaks only as of the date on which it is made. New risks and uncertainties arise from time to time, and it is impossible for us to predict those events or how they may affect us. Except as required by law, we are not obligated to, and do not intend to, update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

22

Executive Summary

We are a specialty finance company that invests in residential mortgage-backed securities, or RMBS, residential mortgage loans, real estate related securities and various other asset classes. We are externally managed by Fixed Income Discount Advisory Company, which we refer to as FIDAC. FIDAC is a fixed-income investment management company specializing in managing investments in Agency RMBS, which are mortgage pass-through certificates, collateralized mortgage obligations, or CMOs, and other mortgage-backed securities representing interests in or obligations backed by pools of mortgage loans issued or guaranteed by the Federal National Mortgage Association, or Fannie Mae, the Federal Home Loan Mortgage Corporation, or Freddie Mac, and the Government National Mortgage Association, or Ginnie Mae.

We have elected and intend to qualify to be taxed as a REIT for federal income tax purposes commencing with our taxable year ending on December 31, 2007. Our targeted asset classes and the principal investments we expect to make in each are as follows:

- o RMBS, consisting of:
 - o Non-Agency RMBS, including investment-grade and non-investment grade classes, including the BB-rated, B-rated and non-rated classes
 - o Agency RMBS
- o Whole mortgage loans, consisting of:
 - o Prime mortgage loans
 - o Jumbo prime mortgage loans
 - o Alt-A mortgage loans
- o Asset Backed Securities, or ABS, consisting of:
 - o Commercial mortgage-backed securities, or CMBS
 - o Debt and equity tranches of CDOs
 - o Consumer and non-consumer ABS, including investment-grade and non-investment grade classes, including the BB-rated, B-rated and non-rated classes

We completed our initial public offering on November 21, 2007. In that offering and in a concurrent private offering we raised net proceeds of approximately \$533.6 million. We completed a second public offering and second private offering on October 29, 2008. In these offerings we raised net proceeds of approximately \$301.0 million and we completed investing these proceeds during the first quarter of 2009. We completed a third public offering and third private offering on April 21, 2009. In these offerings we raised net proceeds of approximately \$851.0 and we have commenced investing these proceeds.

Our objective is to provide attractive risk-adjusted returns to our investors over the long-term, primarily through dividends and secondarily through capital appreciation. We intend to achieve this objective by investing in a broad class of financial assets to construct an investment portfolio that is designed to achieve attractive risk-adjusted returns and that is structured to comply with the various federal income tax requirements for REIT status.

Since we commenced operations in November 2007, we have focused our investment activities on acquiring non-Agency RMBS and on purchasing residential mortgage loans that have been originated by select high-quality originators,

23

including the retail lending operations of leading commercial banks. Our investment portfolio at March 31, 2009 was weighted toward non-Agency RMBS. We expect that over the near term our investment portfolio will continue to be weighted toward RMBS, subject to maintaining our REIT qualification and our 1940 Act exemption. In addition, we have engaged in and depending on market

conditions, anticipate continuing to engage in transactions with residential mortgage lending operations of leading commercial banks and other high-quality originators in which we identify and re-underwrite residential mortgage loans owned by such entities, and rather than purchasing and securitizing such residential mortgage loans ourselves, we and the originator would structure the securitization and we would purchase the resulting mezzanine and subordinate non-Agency RMBS. We may also engage in similar transactions with non-Agency RMBS in which we would acquire AAA-rated non-Agency RMBS and immediately re-securitize those securities. We would sell the resulting AAA-rated super senior RMBS and retain the AAA-rated mezzanine RMBS.

Our investment strategy is intended to take advantage of opportunities in the current interest rate and credit environment. We will adjust our strategy to changing market conditions by shifting our asset allocations across these various asset classes as interest rate and credit cycles change over time. We believe that our strategy, combined with FIDAC's experience, will enable us to pay dividends and achieve capital appreciation throughout changing market cycles. We expect to take a long-term view of assets and liabilities, and our reported earnings and mark-to-market valuations at the end of a financial reporting period will not significantly impact our objective of providing attractive risk-adjusted returns to our stockholders over the long-term.

We use leverage to seek to increase our potential returns and to fund the acquisition of our assets. Our income is generated primarily by the difference, or net spread, between the income we earn on our assets and the cost of our borrowings. We expect to finance our investments using a variety of financing sources including repurchase agreements, warehouse facilities, securitizations, commercial paper and term financing CDOs. We may manage our debt by utilizing interest rate hedges, such as interest rate swaps, to reduce the effect of interest rate fluctuations related to our debt.

Recent Developments

We commenced operations in November 2007 in the midst of challenging market conditions which affected the cost and availability of financing from the facilities with which we expected to finance our investments. These instruments included repurchase agreements, warehouse facilities, securitizations, asset-backed commercial paper, or ABCP, and term CDOs. The liquidity crisis which commenced in August 2007 affected each of these sources--and their individual providers--to different degrees; some sources generally became unavailable, some remained available but at a high cost, and some were largely unaffected. For example, in the repurchase agreement market, non-Agency RMBS became harder to finance, depending on the type of assets collateralizing the RMBS. The amount, term and margin requirements associated with these types of financings were also impacted. At that time, warehouse facilities to finance whole loan prime residential mortgages were generally available from major banks, but at significantly higher cost and had greater margin requirements than previously offered. It was also extremely difficult to term finance whole loans through securitization or bonds issued by a CDO structure. Financing using ABCP froze as issuers became unable to place (or roll) their securities, which resulted, in some instances, in forced sales of mortgage-backed securities, or MBS, and other securities which further negatively impacted the market value of these assets.

Although the credit markets had been undergoing much turbulence, as we started ramping up our portfolio in late 2007, we noted a slight easing. We entered into a number of repurchase agreements we could use to finance RMBS. In January 2008, we entered into two whole mortgage loan repurchase agreements. As we began to see the availability of financing, we were also seeing better underwriting standards used to originate new mortgages. We commenced buying and financing RMBS and also entered into agreements to purchase whole mortgage loans. We purchased high credit quality assets which we believed we would be readily able to finance.

Beginning in mid-February 2008, credit markets experienced a dramatic and sudden adverse change. The severity of the limitation on liquidity was largely unanticipated by the markets. Credit once again froze, and in the mortgage market, valuations of non-Agency RMBS and whole mortgage loans came under severe pressure. This credit crisis began in early February 2008, when a heavily leveraged investor announced that it had to de-lever and liquidate a portfolio of approximately \$30 billion of non-Agency RMBS. Prices of these types of securities dropped dramatically, and lenders started lowering the prices on non-Agency RMBS that they held as collateral to secure the loans they had extended. The subsequent failure in March 2008 of Bear Stearns & Co. worsened the crisis. As the year progressed, deterioration in the fair value of our assets continued, we received and met margin calls under our repurchase agreements, which resulted in our obtaining additional funding from third parties, including from Annaly, and taking other steps to increase our liquidity.

The challenges of the first half of 2008 have continued throughout 2008 and so far into 2009, as financing difficulties have severely pressured liquidity and asset values. In September 2008, Lehman Brothers Holdings, Inc., a major

investment bank, experienced a major liquidity crisis and failed. Securities trading remains limited and mortgage securities financing markets remain challenging as the industry continues to report negative news. This dislocation in the non-Agency mortgage sector has made it difficult for us to obtain short-term financing on favorable terms. As a result, we have completed loan securitizations in order to obtain long-term financing and terminated our un-utilized whole loan repurchase agreements in order to avoid paying non-usage fees under those agreements. In addition, we have continued to seek funding from Annaly. Under these circumstances, we expect to take actions intended to protect our liquidity, which may include reducing borrowings and disposing of assets as well as raising capital.

During this period of market dislocation, fiscal and monetary policymakers have established new liquidity facilities for primary dealers and commercial banks, reduced short-term interest rates, and passed legislation that is intended to address the challenges of mortgage borrowers and lenders. This legislation, the Housing and Economic Recovery Act of 2008, seeks to forestall home foreclosures for distressed borrowers and assist communities with foreclosure problems.

Subsequent to June 30, 2008, there were increased market concerns about Freddie Mac and Fannie Mae's ability to withstand future credit losses associated with securities held in their investment portfolios, and on which they provide guarantees, without the direct support of the federal government. In September 2008 Fannie Mae and Freddie Mac were placed into the conservatorship of the Federal Housing Finance Agency, or FHFA, their federal regulator, pursuant to its powers under The Federal Housing Finance Regulatory Reform Act of 2008, a part of the Housing and Economic Recovery Act of 2008. As the conservator of Fannie Mae and Freddie Mac, the FHFA controls and directs the operations of Fannie Mae and Freddie Mac and may (1) take over the assets of and operate Fannie Mae and Freddie Mac with all the powers of the shareholders, the directors, and the officers of Fannie Mae and Freddie Mac and conduct all business of Fannie Mae and Freddie Mac; (2) collect all obligations and money due to Fannie Mae and Freddie Mac; (3) perform all functions of Fannie Mae and Freddie Mac which are consistent with the conservator's appointment; (4) preserve and conserve the assets and property of Fannie Mae and Freddie Mac; and (5) contract for assistance in fulfilling any function, activity, action or duty of the conservator.

In addition to FHFA becoming the conservator of Fannie Mae and Freddie Mac, (i) the U.S. Department of Treasury and FHFA have entered into preferred stock purchase agreements between the U.S. Department of Treasury, or the Treasury, and Fannie Mae and Freddie Mac pursuant to which the Treasury will ensure that each of Fannie Mae and Freddie Mac maintains a positive net worth; (ii) the Treasury has established a new secured lending credit facility which will be available to Fannie Mae, Freddie Mac, and the Federal Home Loan Banks, which is intended to serve as a liquidity backstop, which will be available until December 2009; and (iii) the Treasury has initiated a temporary program to purchase RMBS issued by Fannie Mae and Freddie Mac. Given the highly fluid and evolving nature of these events, it is unclear how our business will be impacted. Based upon the further activity of the U.S. government or market response to developments at Fannie Mae or Freddie Mac, our business could be adversely impacted.

25

The Emergency Economic Stabilization Act of 2008, or EESA, was recently enacted. The EESA provides the U.S. Secretary of the Treasury with the authority to establish a Troubled Asset Relief Program, or TARP, to purchase from financial institutions up to \$700 billion of equity or preferred securities, residential or commercial mortgages and any securities, obligations, or other instruments that are based on or related to such mortgages, that in each case was originated or issued on or before March 14, 2008, as well as any other financial instrument that the U.S. Secretary of the Treasury, after consultation with the Chairman of the Board of Governors of the Federal Reserve System, determines the purchase of which is necessary to promote financial market stability, upon transmittal of such determination, in writing, to the appropriate committees of the U.S. Congress. The EESA also provides for a program that would allow companies to insure their troubled assets.

In addition, the U.S. Government, Federal Reserve and other governmental and regulatory bodies have taken or are considering taking other actions to address the financial crisis. The Term Asset-Backed Securities Loan Facility, or TALF, was first announced by the Treasury on November 25, 2008, and has been expanded in size and scope since its initial announcement. Under the TALF, the Federal Reserve Bank of New York makes non-recourse loans to borrowers to fund their purchase of eligible assets, currently certain asset-backed securities but not residential mortgage-backed securities. In addition, on March 23, 2009 the government announced that the Treasury in conjunction with the Federal Deposit Insurance Corporation, or FDIC, and the Federal Reserve, would create the Public-Private Investment Program, or PPIP. The PPIP aims to recreate a market for specific illiquid residential and commercial loans and securities through a number of joint public and private investment funds. The PPIP is designed to draw new private capital into the market for these securities and loans by providing government equity co-investment and attractive public financing. As

these programs are still in early stages of development, it is not possible for us to predict how these programs will impact our business.

Although these aggressive steps are intended to protect and support the US housing and mortgage market, we continue to operate under very difficult market conditions. As a result, there can be no assurance that the EESA, the TARP, the TALF, PPIP or other policy initiatives will have a beneficial impact on the financial markets, including current extreme levels of volatility. We cannot predict whether or when such actions may occur or what impact, if any, such actions could have on our business, results of operations and financial condition.

Trends

We expect the results of our operations to be affected by various factors, many of which are beyond our control. Our results of operations will primarily depend on, among other things, the level of our net interest income, the market value of our assets, and the supply of and demand for such assets. Our net interest income, which reflects the amortization of purchase premiums and accretion of discounts, varies primarily as a result of changes in interest rates, borrowing costs, and prepayment speeds, which is a measurement of how quickly borrowers pay down the unpaid principal balance on their mortgage loans.

Prepayment Speeds. Prepayment speeds, as reflected by the Constant Prepayment Rate, or CPR, vary according to interest rates, the type of investment, conditions in financial markets, competition and other factors, none of which can be predicted with any certainty. In general, when interest rates rise, it is relatively less attractive for borrowers to refinance their mortgage loans, and as a result, prepayment speeds tend to decrease. When interest rates fall, prepayment speeds tend to increase. For mortgage loan and RMBS investments purchased at a premium, as prepayment speeds increase, the amount of income we earn decreases because the purchase premium we paid for the bonds amortizes faster than expected. Conversely, decreases in prepayment speeds result in increased income and can extend the period over which we amortize the purchase premium. For mortgage loan and RMBS investments purchased at a discount, as prepayment speeds increase, the amount of income we earn increases because of the acceleration of the accretion of the discount into interest income. Conversely, decreases in prepayment speeds result in decreased income and can extend the period over which we accrete the purchase discount into interest income.

26

Rising Interest Rate Environment. As indicated above, as interest rates rise, prepayment speeds generally decrease, increasing our net interest income. Rising interest rates, however, increase our financing costs which may result in a net negative impact on our net interest income. In addition, if we acquire Agency and non-Agency RMBS collateralized by monthly reset adjustable-rate mortgages, or ARMs, and three- and five-year hybrid ARMs, such interest rate increases could result in decreases in our net investment income, as there could be a timing mismatch between the interest rate reset dates on our RMBS portfolio and the financing costs of these investments. Monthly reset ARMs are ARMs on which coupon rates reset monthly based on indices such as the one-month London Interbank Offering Rate, or LIBOR. Hybrid ARMs are mortgages that have interest rates that are fixed for an initial period (typically three, five, seven or ten years) and thereafter reset at regular intervals subject to interest rate caps.

With respect to our floating rate investments, such interest rate increases should result in increases in our net investment income because our floating rate assets are greater in amount than the related floating rate liabilities. Similarly, such an increase in interest rates should generally result in an increase in our net investment income on fixed-rate investments made by us because our fixed-rate assets would be greater in amount than our fixed-rate liabilities. We expect, however, that our fixed-rate assets would decline in value in a rising interest rate environment and that our net interest spreads on fixed rate assets could decline in a rising interest rate environment to the extent such assets are financed with floating rate debt.

Falling Interest Rate Environment. As interest rates fall, prepayment speeds generally increase, decreasing our net interest income. Falling interest rates, however, decrease our financing costs which may result in a net positive impact on our net interest income. In addition, if we acquire Agency and non-Agency RMBS collateralized by monthly reset adjustable-rate mortgages, or ARMs, and three- and five-year hybrid ARMs, such interest rate decreases could result in increases in our net investment income, as there could be a timing mismatch between the interest rate reset dates on our RMBS portfolio and the financing costs of these investments. Monthly reset ARMs are ARMs on which coupon rates reset monthly based on indices such as the one-month London Interbank Offering Rate, or LIBOR. Hybrid ARMs are mortgages that have interest rates that are fixed for an initial period (typically three, five, seven or ten years) and thereafter reset at regular intervals subject to interest rate caps.

With respect to our floating rate investments, such interest rate decreases may result in decreases in our net investment income because our floating rate assets may be greater in amount than the related floating rate liabilities.

Similarly, such a decrease in interest rates should generally result in an increase in our net investment income on fixed-rate investments made by us because our fixed-rate assets would be greater in amount than our fixed-rate liabilities. We expect, however, that our fixed-rate assets would increase in value in a falling interest rate environment and that our net interest spreads on fixed rate assets could increase in a falling interest rate environment to the extent such assets are financed with floating rate debt.

Credit Risk. One of our strategic focuses is acquiring assets which we believe to be of high credit quality. We believe this strategy will generally keep our credit losses and financing costs low. We retain the risk of potential credit losses on all of the residential mortgage loans we hold in our portfolio. Additionally, some of our investments in RMBS may be qualifying interests for purposes of maintaining our exemption from the 1940 Act because we retain a 100% ownership interest in the underlying loans. If we purchase all classes of these securitizations, we have the credit exposure on the underlying loans. Prior to the purchase of these securities, we conduct a due diligence process that allows us to remove loans that do not meet our credit standards based on loan-to-value ratios, borrowers' credit scores, income and asset documentation and other criteria that we believe to be important indications of credit risk.

Size of Investment Portfolio. The size of our investment portfolio, as measured by the aggregate unpaid principal balance of our mortgage loans and aggregate principal balance of our mortgage related securities and the other assets we own is also a key revenue driver. Generally, as the size of our investment portfolio grows, the amount of interest income we receive increases. The larger investment portfolio, however, drives increased expenses as we incur additional interest expense to finance the purchase of our assets.

27

Since changes in interest rates may significantly affect our activities, our operating results depend, in large part, upon our ability to effectively manage interest rate risks and prepayment risks while maintaining our status as a REIT.

Current Environment. The current weakness in the broader mortgage markets could adversely affect one or more of our potential lenders or any of our lenders and could cause one or more of our potential lenders or any of our lenders to be unwilling or unable to provide us with financing or require us to post additional collateral. In general, this could potentially increase our financing costs and reduce our liquidity or require us to sell assets at an inopportune time. We expect to use a number of sources to finance our investments, including repurchase agreements, warehouse facilities, securitizations, asset-backed commercial paper and term CDOs. Current market conditions have affected the cost and availability of financing from each of these sources and their individual providers to different degrees; some sources generally are unavailable, some are available but at a high cost, and some are largely unaffected. For example, in the repurchase agreement market, borrowers have been affected differently depending on the type of security they are financing. Non-Agency RMBS have been harder to finance, depending on the type of assets collateralizing the RMBS. The amount, term and margin requirements associated with these types of financings have been negatively impacted.

Currently, warehouse facilities to finance whole loan prime residential mortgages are generally available from major banks, but at significantly higher cost and have greater margin requirements than previously offered. Many major banks that offer warehouse facilities have also reduced the amount of capital available to new entrants and consequently the size of those facilities offered now are smaller than those previously available. We decided to terminate our two whole loan repurchase agreements in order to avoid paying non-usage fees under those agreements.

It is currently a challenging market to term finance whole loans through securitization or bonds issued by a CDO structure. The highly rated senior bonds in these securitizations and CDO structures currently have liquidity, but at much wider spreads than issues priced in recent history. The junior subordinate tranches of these structures currently have few buyers and current market conditions have forced issuers to retain these lower rated bonds rather than sell them.

Certain issuers of ABCP have been unable to place (or roll) their securities, which has resulted, in some instances, in forced sales of MBS and other securities which has further negatively impacted the market value of these assets. These market conditions are fluid and likely to change over time. As a result, the execution of our investment strategy may be dictated by the cost and availability of financing from these different sources.

If one or more major market participants fails or otherwise experiences a major liquidity crisis, as was the case for Bear Stearns & Co. in March 2008, and Lehman Brothers Holdings Inc. in September 2008, it could negatively impact the marketability of all fixed income securities and this could negatively impact the value of the securities we acquire, thus reducing our net book value. Furthermore, if many of our potential lenders or any of our lenders are unwilling or unable to provide us with financing, we could be forced to sell our securities or residential mortgage loans at an inopportune time when prices are

depressed.

As described above, there has been significant government action in the capital markets. However, there can be no assurance that the government's actions with respect to Freddie Mac and Fannie Mae, the EESA, the TARP, the TALF, the PPIP or other policy initiatives will have a beneficial impact on the financial markets, including current extreme levels of volatility. To the extent the market does not respond favorably to these actions, or these actions do not function as intended, our business may not receive the anticipated positive impact from them. In addition, the U.S. Government, Federal Reserve and other governmental and regulatory bodies have taken or are considering taking other actions to address the financial crisis. We cannot predict whether or when such actions may occur or what impact, if any, such actions could have on our business, results of operations and financial condition.

In the current market, it may be difficult or impossible to obtain third party pricing on the investments we purchase. In addition, validating third party pricing for our investments may be more subjective as fewer participants may be willing to provide this service to us. Moreover, the current market is more illiquid than in recent history for some of the investments we purchase. Illiquid investments typically experience greater price volatility as a ready market does not exist. As volatility increases or liquidity decreases we may have greater difficulty financing our investments which may negatively impact our earnings and the execution of our investment strategy.

28

Critical Accounting Policies

Our financial statements are prepared in accordance with accounting principles generally accepted in the United States of America, or GAAP. These accounting principles may require us to make some complex and subjective decisions and assessments. Our most critical accounting policies will involve decisions and assessments that could affect our reported assets and liabilities, as well as our reported revenues and expenses. We believe that all of the decisions and assessments upon which our financial statements are based will be reasonable at the time made and based upon information available to us at that time. At each quarter end, we calculate estimated fair value using a pricing model. We validate our pricing model by obtaining independent pricing on all of our assets and performing a verification of those sources to our own internal estimate of fair value. We have identified what we believe will be our most critical accounting policies to be the following:

Mortgage Loan Sales and Securitizations

We periodically enter into transactions in which we sell financial assets, such as RMBS, mortgage loans and other assets. We also securitize and re-securitize financial assets. These transactions are recorded in accordance with SFAS 140 Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities (SFAS 140) and are accounted for as either a "sale" and the loans held for investment are removed from the consolidated statements of financial condition or as a "financing" and are classified as "Securitized loans held for investment" on the Company's consolidated statements of financial condition, depending upon the structure of the securitization transaction. In these securitizations and re-securitizations we sometimes retain or acquire senior or subordinated interests in the securitized or re-securitized assets. Gains and losses on such securitizations or re-securitizations are recognized using the guidance in SFAS No. 140 which is based on a financial components approach that focuses on control. Under this approach, after a transfer of financial assets, an entity recognizes the financial and servicing assets it controls and the liabilities it has incurred, derecognizes financial assets when control has been surrendered, and derecognizes liabilities when extinguished.

We determine the gain or loss on sale of mortgage loans by allocating the carrying value of the underlying mortgage between securities or loans sold and the interests retained based on their fair values. The gain or loss on sale is the difference between the cash proceeds from the sale and the amount allocated to the securities or loans sold.

Valuation of Investments

On January 1, 2008, we adopted SFAS 157, which defines fair value, establishes a framework for measuring fair value, and establishes a three-level valuation hierarchy for disclosure of fair value measurement and enhances disclosure requirements for fair value measurements. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows:

Level 1 - inputs to the valuation methodology are quoted prices (unadjusted) for identical assets and liabilities in active markets.

Level 2 - inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly,

for substantially the full term of the financial instrument.

Level 3 - inputs to the valuation methodology are unobservable and significant to overall fair value.

29

Mortgage-Backed Securities and interest rate swaps are valued using a pricing model. The MBS pricing model incorporates such factors as coupons, prepayment speeds, spread to the Treasury and swap curves, convexity, duration, periodic and life caps, and credit enhancement. Interest rate swaps are modeled by incorporating such factors as the Treasury curve, LIBOR rates, and the receive rate on the interest rate swaps. Management reviews the fair values determined by the pricing model and compares its results to dealer quotes received on each investment to validate the reasonableness of the valuations indicated by the pricing models. The dealer quotes incorporate common market pricing methods, including a spread measurement to the Treasury curve or interest rate swap curve as well as underlying characteristics of the particular security including coupon, periodic and life caps, rate reset period, issuer, additional credit support and expected life of the security.

Any changes to the valuation methodology are reviewed by management to ensure the changes are appropriate. As markets and products develop and the pricing for certain products becomes more transparent, we continue to refine our valuation methodologies. The methods used by us may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while we believe our valuation methods are appropriate and consistent with other market participants, the use of different methodologies, or assumptions, to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. We use inputs that are current as of the measurement date, which may include periods of market dislocation, during which price transparency may be reduced. This condition could cause our financial instruments to be reclassified from Level 2 to Level 3.

As of March 31, 2009 and December 31, 2008, we have classified the valuation of our RMBS as "Level 2" as described above.

Securitized Loans Held for Investment

Our securitized residential mortgage loans are comprised of fixed-rate and variable-rate loans. We purchase pools of residential mortgage loans through a select group of originators. Mortgage loans are designated as held for investment, recorded on trade date, and are carried at their principal balance outstanding, plus any premiums or discounts which are amortized or accreted over the estimated life of the loan, less allowances for loan losses.

Available-for-Sale Securities

Our investments in RMBS are classified as available-for-sale securities that are carried on the consolidated statement of financial condition at their fair value. This classification results in changes in fair values being recorded as adjustments to accumulated other comprehensive income or loss, which is a component of stockholders' equity.

When the fair value of an available-for-sale security is less than its amortized cost for an extended period or there is a significant decline in value, we consider whether there is an other-than-temporary impairment in the value of the security. If, based on our analysis, an other-than-temporary impairment exists, the cost basis of the security is written down to the then-current fair value, and the unrealized loss is transferred from accumulated other comprehensive loss as an immediate reduction of current earnings (as if the loss had been realized in the period of other-than-temporary impairment). The determination of other-than-temporary impairment is a subjective process, and different judgments and assumptions could affect the timing of loss realization.

We consider the following factors when determining an other-than-temporary impairment for a security:

- o The length of time and the extent to which the market value has been less than the amortized cost;
- o and the financial condition and near-term prospects of the issuer;
- o The credit quality and cash flow performance of the security; and

30

- o Our intent to hold the security for a period of time sufficient to allow for any anticipated recovery in market value.

The determination of other-than-temporary impairment is made at least quarterly. If we determine an impairment to be other than temporary we will realize a loss which will negatively impact current income.

Investment Consolidation

For each investment we make, we evaluate the underlying entity that issued the securities we will acquire or to which we will make a loan to determine the appropriate accounting treatment. In performing our analysis, we refer to guidance in Statement of Financial Accounting Standards (SFAS) No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, and FASB Interpretation No. (FIN) 46R, Consolidation of Variable Interest Entities. FIN 46R addresses the application of Accounting Research Bulletin No. 51, Consolidated Financial Statements, to certain entities in which voting rights are not effective in identifying an investor with a controlling financial interest. In variable interest entities, or VIEs, an entity is subject to consolidation under FIN 46R if the investors either do not have sufficient equity at risk for the entity to finance its activities without additional subordinated financial support, are unable to direct the entity's activities, or are not exposed to the entity's losses or entitled to its residual returns. VIEs within the scope of FIN 46R are required to be consolidated by their primary beneficiary. The primary beneficiary of a VIE is determined to be the party that absorbs a majority of the entity's expected losses, its expected returns, or both. This determination can sometimes involve complex and subjective analyses.

Interest Income Recognition

Interest income on available-for-sale securities and loans held for investment is recognized over the life of the investment using the effective interest method as described by SFAS No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, for securities of high credit quality and EITF No. 99-20, Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interests in Securitized Financial Assets, for all other securities. Income recognition is suspended for loans when, in the opinion of management, a full recovery of income and principal becomes doubtful. Income recognition is resumed when the loan becomes contractually current and performance is demonstrated to be resumed.

Under SFAS No. 91 and EITF No. 99-20, management will estimate, at the time of purchase, the future expected cash flows and determine the effective interest rate based on these estimated cash flows and our purchase price. As needed, these estimated cash flows will be updated and a revised yield computed based on the current amortized cost of the investment. In estimating these cash flows, there will be a number of assumptions that will be subject to uncertainties and contingencies. These include the rate and timing of principal payments (including prepayments, repurchases, defaults and liquidations), the pass-through or coupon rate and interest rate fluctuations. In addition, interest payment shortfalls due to delinquencies on the underlying mortgage loans, and the timing of the magnitude of credit losses on the mortgage loans underlying the securities have to be judgmentally estimated. These uncertainties and contingencies are difficult to predict and are subject to future events that may impact management's estimates and our interest income.

Accounting For Derivative Financial Instruments

Our policies permit us to enter into derivative contracts, including interest rate swaps and interest rate caps, as a means of mitigating our interest rate risk. We intend to use interest rate derivative instruments to mitigate interest rate risk rather than to enhance returns.

We account for derivative financial instruments in accordance with SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities ("SFAS 133"), as amended and interpreted. SFAS 133 requires an entity to recognize all derivatives as either assets or liabilities in the statement of financial condition and to measure those instruments at fair value. Additionally, the fair value adjustments will affect either other comprehensive income in stockholders' equity until the hedged item is recognized in earnings or net income depending on whether the derivative instrument qualifies as a hedge for accounting purposes and, if so, the nature of the hedging activity.

In the normal course of business, we may use a variety of derivative financial instruments to economically manage, or hedge, interest rate risk. These derivative financial instruments must be effective in reducing our interest rate risk exposure in order to qualify for hedge accounting. When the terms of an underlying transaction are modified, or when the underlying hedged item ceases to exist, all changes in the fair value of the instrument are included in net income for each period until the derivative instrument matures or is settled. Any derivative instrument used for risk management that does not meet the hedging criteria is carried at fair value with the changes in value included in net income.

Derivatives will be used for economic hedging purposes rather than speculation. We will rely on quotations from third parties to determine fair values. If our hedging activities do not achieve our desired results, our reported earnings may be adversely affected.

Reserve for Possible Credit Losses

The expense for possible credit losses in connection with debt investments is a charge to earnings to increase the allowance for possible credit losses to the level that management estimates to be adequate considering delinquencies, loss experience and collateral quality. Other factors considered relate to geographic trends and product diversification, the size of the portfolio and current economic conditions. Based upon these factors, we establish the provision for possible credit losses by category of asset. When it is probable that we will be unable to collect all amounts contractually due, the account is considered impaired.

Where impairment is indicated, a valuation write-down or write-off is measured based upon the excess of the recorded investment amount over the net fair value of the collateral, as reduced by selling costs. Any deficiency between the carrying amount of an asset and the net sales price of repossessed collateral is charged to the allowance for credit losses.

Income Taxes

We have elected and intend to qualify to be taxed as a REIT. Accordingly, we will generally not be subject to corporate federal or state income tax to the extent that we make qualifying distributions to our stockholders, and provided we satisfy on a continuing basis, through actual investment and operating results, the REIT requirements including certain asset, income, distribution and stock ownership tests. If we fail to qualify as a REIT, and do not qualify for certain statutory relief provisions, we will be subject to federal, state and local income taxes and may be precluded from qualifying as a REIT for the subsequent four taxable years following the year in which we lost our REIT qualification. Accordingly, our failure to qualify as a REIT could have a material adverse impact on our results of operations and amounts available for distribution to our stockholders.

The dividends paid deduction of a REIT for qualifying dividends to its stockholders is computed using our taxable income as opposed to net income reported on the financial statements. Taxable income, generally, will differ from net income reported on the financial statements because the determination of taxable income is based on tax provisions and not financial accounting principles.

In the future, we may create and elect to treat certain of our subsidiaries as taxable REIT subsidiaries, or TRSs. In general, a TRS of ours may hold assets and engage in activities that we cannot hold or engage in directly and generally may engage in any real estate or non-real estate-related business. A TRS is subject to federal, state and local corporate income taxes.

While our TRS will generate net income, our TRS can declare dividends to us which will be included in our taxable income and necessitate a distribution to our stockholders. Conversely, if we retain earnings at the TRS level, no distribution is required and we can increase book equity of the consolidated entity.

32

Financial Condition

At March 31, 2009, our portfolio consisted of \$1.1 billion of RMBS and of approximately \$565.9 million of securitized mortgage loans.

The following table summarizes certain characteristics of our portfolio at March 31, 2008 and December 31, 2008.

	<C> <C>	<C> <C>
	March 31, 2009	December 31, 2008

Residential Mortgage-Backed Securities

The table below summarizes our RMBS investments at March 31, 2009 and December 31, 2008:

	March 31, 2009	December 31, 2008
	(dollars in thousands)	
Amortized cost	\$1,342,497	\$1,122,135
Gross unrealized gains	9,504	7,700
Gross unrealized losses	(266,209)	(274,368)
Fair value	\$1,085,792	\$855,467

As of March 31, 2009, the RMBS in our portfolio were purchased at a net discount to their par value. Our RMBS had a weighted average amortized cost of 94.8% and 99.0% at March 31, 2009 and December 31, 2008, respectively.

The following table summarizes certain characteristics of our RMBS portfolio at March 31, 2009 and December 31, 2008.

33

	Estimated Value (dollars in thousands) (1)	Weighted Averages		
		Coupon	Yield to Maturity	Constant Prepayment Rate (2)
March 31, 2009	\$1,085,792	6.07%	8.00%	12.4%
December 31, 2008	\$855,467	6.12%	6.55%	13.0%

(1) All assets listed in this chart are carried at their fair value.

(2) Represents the estimated percentage of principal that will be prepaid over the next three months based on historical principal paydowns.

Actual maturities of RMBS are generally shorter than stated contractual maturities, as they are affected by the contractual lives of the underlying mortgages, periodic payments of principal, and prepayments of principal. The stated contractual final maturity of the mortgage loans underlying our portfolio of RMBS ranges up to 38 years, but the expected maturity is subject to change based on the prepayments of the underlying loans. As of March 31, 2009, the average final contractual maturity of the RMBS portfolio is 29 years, and as of December 31, 2008, it was 30 years. The estimated weighted average months to maturity of the RMBS in the tables below are based upon our prepayment expectations, which are based on both proprietary and subscription-based financial models. Our prepayment projections consider current and expected trends in interest rates, interest rate volatility, steepness of the yield curve, the mortgage rate of the outstanding loan, time to reset and the spread margin of the reset.

The constant prepayment rate, or CPR, attempts to predict the percentage of principal that will be prepaid over a period of time. We calculate average CPR on a quarterly basis based on historical principal paydowns. As interest rates rise, the rate of refinancings typically declines, which we expect may result in lower rates of prepayment and, as a result, a lower portfolio CPR. Conversely, as interest rates fall, the rate of refinancings typically increases, which we expect may result in higher rates of prepayment and, as a result, a higher portfolio CPR.

After the reset date, interest rates on our hybrid adjustable rate RMBS securities adjust annually based on spreads over various LIBOR and Treasury indices. These interest rates are subject to caps that limit the amount the applicable interest rate can increase during any year, known as periodic cap, and through the maturity of the applicable security, known as a lifetime cap. The weighted average periodic cap for the portfolio is an increase of 1.3% and the weighted average maximum lifetime increases and decreases for the portfolio are 10.2%.

The following table summarizes our RMBS according to their estimated weighted average life classifications as of March 31, 2009 and December 31, 2008:

	Fair Value	
	March 31, 2009	December 31, 2008
	(dollars in thousands)	

Less than one year	\$	-	\$	-
Greater than one year and less than five years		909,005		768,163
Greater than or equal to five years		176,787		87,304
		-----		-----
Total		\$1,085,792		\$855,467
		=====		=====

Results of Operations for the Quarters Ended March 31, 2009 and March 31, 2008.

Net Income/Loss Summary

34

Our net income for the quarter ended March 31, 2009 was \$18.9 million, or \$0.11 per share. Our net income was generated primarily by interest income on our portfolio. Our net loss for the quarter ended March 31, 2008 was \$54.9 million, or \$1.46 per share. We attribute the net loss for the quarter ended March 31, 2008 to realized losses on sales of assets and unrealized losses on interest rate swaps that were recorded during the quarter.

The table below presents the net income/loss summary for the quarter ended March 31, 2009 and 2008:

	<C>	<C>
Net Income/Loss Summary (dollars in thousands, except for share and per share data)	For the Quarter Ended March 31, 2009	For the Quarter Ended March 31, 2008

</TABLE>

35

Interest Income and Average Earning Asset Yield

We had average earning assets of \$1.7 billion and \$1.6 billion for the quarters ended March 31, 2009 and 2008, respectively. Our interest income was \$28.0 million and \$28.2 million for the quarters ended March 31, 2009 and 2008, respectively. Our interest income remained relatively unchanged even though we increased our capital due to the deleveraging of the interest earning assets in our portfolio subsequent to the quarter ended March 31, 2008. The annualized yield on our portfolio was 6.44% and 6.63% for the quarters ended March 31, 2009 and 2008, respectively. The decline in the annualized yield is attributed to a decrease in leverage on our portfolio of interest earning assets.

Interest Expense and the Cost of Funds

Our largest expense is the cost of borrowed funds. We had average borrowed funds of \$1.0 billion and \$1.3 billion and total interest expense of \$9.0 million and \$14.0 million for the quarters ended March 31, 2009 and 2008, respectively. Our annualized cost of funds was 3.48% and 4.23% for the quarters ended March 31, 2009 and 2008, respectively. The decline in interest expense is related to a decrease in the borrowing rates for the quarter ended March 31, 2009 versus March 31, 2008 and the subsequent termination of interest rate swaps that were in the portfolio for the period ended March 31, 2008.

The table below shows our average borrowed funds, interest expense, average cost of funds, average one-month LIBOR, average six-month LIBOR, average one-month LIBOR relative to average six-month LIBOR, and average cost of funds relative to average one- and six- month LIBOR for the quarter ended March 31, 2009, year ended December 31, 2008, and the four quarters in 2008.

	Average Cost of Funds							
	(Ratios have been annualized, dollars in thousands)							
to	Average Borrowed Funds	Average Interest Expense	Average Cost of Funds	Average One-Month LIBOR	Average Six-Month LIBOR	Average One-Month LIBOR Relative to Average Six-Month LIBOR	Average Cost of Funds Relative to Average One-Month LIBOR	Average Cost of Funds Relative to Average Six-Month LIBOR
For the quarter ended March 31, 2009	\$1,038,460	\$9,042	3.48%	0.46%	1.74%	(1.28%)	3.02%	1.74%
For the year ended December 31, 2008	\$1,304,873	\$60,544	4.64%	2.68%	3.06%	(0.38%)	1.96%	1.58%
For the quarter ended December 31, 2008	\$1,105,239	\$10,954	3.96%	2.23%	2.94%	(0.71%)	1.73%	1.02%
For the quarter ended September 30, 2008	\$1,339,531	\$15,543	4.64%	2.62%	3.19%	(0.57%)	2.02%	1.45%
For the quarter ended June 30, 2008	\$1,449,567	\$20,025	5.53%	2.59%	2.93%	(0.34%)	2.94%	2.60%
For the quarter ended March 31, 2008	\$1,325,156	\$14,022	4.23%	3.31%	3.18%	0.13%	0.92%	1.05%

</TABLE>

Net Interest Income

Our net interest income, which equals interest income less interest expense, totaled \$19.0 million and \$14.2 million for the quarters ended March 31, 2009 and 2008, respectively. Our net interest spread, which equals the yield on our average assets for the period less the average cost of funds for the period, was 2.96% and 2.40% for the quarters ended March 31, 2009 and 2008, respectively. We attribute the increase in net interest income and net interest spread to a decline in our interest expense and the interest rates at which we borrow.

The table below shows our average assets held, total interest earned on assets, yield on average interest earning assets, average balance of repurchase

agreements, interest expense, average cost of funds, net interest income, and net interest rate spread for the quarter ended March 31, 2009, the year ended December 31, 2008 and the four quarters in 2008.

Net Interest Income								
(Ratios have been annualized, dollars in thousands)								
Interest Spread	Average Earning Assets Held	Interest Earned on Assets	Yield on Average Interest Earning Assets	Average Debt Balance	Average Interest Expense	Average Cost of Funds	Net Interest Income	Net Rate
For the quarter ended March 31, 2009	\$1,739,767	\$28,007	6.44%	\$1,038,460	\$9,042	3.48%	\$18,965	2.96%
For the year ended December 31, 2008	\$1,711,705	\$102,093	5.96%	\$1,304,873	\$60,544	4.64%	\$44,715	1.32%
For the quarter ended December 31, 2008	\$1,621,205	\$23,254	5.74%	\$1,105,239	\$10,954	3.96%	\$12,702	1.78%
For the quarter ended September 30, 2008	\$1,751,748	\$23,419	5.35%	\$1,339,531	\$15,543	4.64%	\$7,915	0.71%
For the quarter ended June 30, 2008	\$1,917,969	\$29,630	6.18%	\$1,449,567	\$20,025	5.53%	\$9,926	0.65%
For the quarter ended March 31, 2008	\$1,555,896	\$25,790	6.63%	\$1,325,156	\$14,022	4.23%	\$14,172	2.40%

Gains and Losses on Sales of Assets and Interest Rate Swaps

During the quarter ended March 31, 2009, we sold assets with a carrying value of \$544.8 million which resulted in a net gain of approximately \$3.6 million. During the quarter ended March 31, 2008, we sold assets and terminated interest rate swaps with a carrying value of \$394.2 million for an aggregate loss of \$32.8 million.

Management Fee and General and Administrative Expenses

We paid FIDAC a management fee of \$2.6 million and \$2.2 million for the quarters ended March 31, 2009 and 2008, respectively. The management fee is based on stockholder's equity and the increase in the management fee for the quarter ended March 31, 2009 resulted from the increase in the Company's stockholders equity subsequent to its completion of the October 2008 secondary offerings.

General and administrative (or G&A) expenses were \$1.1 million and \$2.6 million for the quarters ended March 31, 2009 and 2008, respectively. We attribute the decline in G&A expense to a decrease in the loan loss provision recorded for the quarter ended March 31, 2009 relative to the quarter ended March 31, 2008.

Total expenses as a percentage of average total assets were 0.94% and 1.10% for the quarters ended March 31, 2009 and 2008, respectively. The decline in total expenses as a percentage of average total assets is the result of a greater average asset base at March 31, 2009.

Currently, FIDAC has waived its right to require us to pay our pro rata portion of rent, telephone, utilities, office furniture, equipment, machinery and other office, internal and overhead expenses of FIDAC and its affiliates required for our operations.

The table below shows our total management fee and G&A expenses as compared to average total assets and average equity for the quarter ended March 31, 2009, for the year ended December 31, 2008, and the four quarters in 2008.

Management Fee and G&A Expenses and Operating Expense Ratios
(Ratios have been annualized, dollars in thousands)

	Total Management Fee and G&A Expenses	Total Management Fee and G&A Expenses/Average Total Assets	Total Management Fee and G&A Expenses/Average Equity
For the quarter ended March 31, 2009	\$3,722	0.94%	3.51%
For the year ended December 31, 2008	\$14,027	0.85%	3.50%
For the quarter ended December 31, 2008	\$3,918	1.10%	4.78%
For the quarter ended September 30, 2008	\$1,934	0.46%	2.46%
For the quarter ended June 30, 2008	\$3,380	0.70%	3.35%
For the quarter ended March 31, 2008	\$4,792	1.10%	4.00%

</TABLE>

Net Income/Loss and Return on Average Equity

Our net income was \$18.9 million for the quarter ended March 31, 2009. Our net loss was \$54.9 million for the quarter ended March 31, 2008. The table below shows our net interest income, gain (loss) on sale of assets, unrealized gains (loss) on interest rate swaps, total expenses, income tax, each as a percentage of average equity, and the return on average equity for the quarter ended March 31, 2009, the year ended December 31, 2008 and the four quarters in 2008. Our return on average equity increased from (45.86%) for the quarter ended March 31, 2008 to 17.82% for the quarter ended March 31, 2009 primarily due to the absence of realized losses on sales of assets and unrealized losses on interest rate swaps that were recorded in the quarter ended March 31, 2008.

	Net Interest Income/Average Equity	Gain/(Loss) on Sale of Investments/Average Equity	Unrealized Gain/(Loss) on Interest Rate Swaps/Average Equity	Total Expenses/Average Equity	Income Tax/Average Equity	Return on Average Equity
For the quarter ended March 31, 2009	17.91%	3.42%	-	(3.51%)	-	17.82%
For the year ended December 31, 2008	11.17%	(38.64%)	1.04%	(3.50%)	-	(29.93%)
For the quarter ended December 31, 2008	15.50%	-	-	(4.78%)	-	10.72%
For the quarter ended September 30, 2008	10.07%	(157.28%)	12.81%	(2.46%)	(0.02%)	(136.88%)
For the quarter ended June 30, 2008	9.84%	1.75%	25.36%	(3.35%)	-	33.60%
For the quarter ended March 31, 2008	11.83%	(27.40%)	(26.29%)	(4.00%)	-	(45.86%)

</TABLE>

Liquidity and Capital Resources

Liquidity measures our ability to meet cash requirements, including ongoing commitments to repay our borrowings, fund and maintain RMBS, mortgage loans and other assets, pay dividends and other general business needs. Our principal sources of capital and funds for additional investments primarily include earnings from our investments, borrowings under securitizations and re-securitizations, repurchase agreements and other financing facilities, and proceeds from equity offerings. We expect these sources of financing will be sufficient to meet our short-term liquidity needs.

We expect to continue to borrow funds in the form of repurchase agreements and, subject to market conditions, other types of financing. The terms of the repurchase transaction borrowings under our master repurchase agreements generally conform to the terms in the standard master repurchase agreement as published by the Securities Industry and Financial Markets Association, or SIFMA, as to repayment, margin requirements and the segregation of all securities we have initially sold under the repurchase transaction. In addition,

each lender typically requires that we include supplemental terms and conditions to the standard master repurchase agreement. Typical supplemental terms and conditions include changes to the margin maintenance requirements, required haircuts, and purchase price maintenance requirements, requirements that all controversies related to the repurchase agreement be litigated in a particular jurisdiction and cross default provisions. These provisions will differ for each of our lenders and will not be determined until we engage in a specific repurchase transaction.

For our short-term (one year or less) and long-term liquidity, which include investing and compliance with collateralization requirements under our repurchase agreements (if the pledged collateral decreases in value or in the event of margin calls created by prepayments of the pledged collateral), we also rely on the cash flow from investments, primarily monthly principal and interest payments to be received on our RMBS and whole mortgage loans, cash flow from the sale of securities as well as any primary securities offerings authorized by our board of directors.

Based on our current portfolio, leverage ratio and available borrowing arrangements, we believe our assets will be sufficient to enable us to meet anticipated short-term (one year or less) liquidity requirements such as to fund our investment activities, pay fees under our management agreement, fund our distributions to stockholders and pay general corporate expenses. However, a decline in the value of our collateral or an increase in prepayment rates substantially above our expectations could cause a temporary liquidity shortfall due to the timing of the necessary margin calls on the financing arrangements and the actual receipt of the cash related to principal paydowns. If our cash resources are at any time insufficient to satisfy our liquidity requirements, we may have to sell debt or additional equity securities in a common stock offering. If required, the sale of RMBS or whole mortgage loans at prices lower than their carrying value would result in losses and reduced income.

Our ability to meet our long-term (greater than one year) liquidity and capital resource requirements will be subject to obtaining additional debt financing and equity capital. Subject to our maintaining our qualification as a REIT as well as market conditions, we expect to use a number of sources to finance our investments, including repurchase agreements, warehouse facilities, securitization, commercial paper and term financing CDOs. Such financing will depend on market conditions for capital raises and for the investment of any proceeds. If we are unable to renew, replace or expand our sources of financing on substantially similar terms, it may have an adverse effect on our business and results of operations. Upon liquidation, holders of our debt securities and shares of preferred stock and lenders with respect to other borrowings will receive a distribution of our available assets prior to the holders of our common stock.

We held cash and cash equivalents of approximately \$12.2 and \$91.4 million at March 31, 2009 and March 31, 2008, respectively. Our cash and cash equivalents declined as we no longer have cash posted as collateral to secure repurchase agreements and interest rate swaps.

Our operating activities provided net cash of approximately \$13.8 million and \$8.0 million for the quarters ended March 31, 2009 and March 31, 2008, respectively.

Our investing activities used net cash of \$3.9 million and \$1.1 billion for the quarters ended March 31, 2009 and March 31, 2008, respectively. During the quarter ended March 31, 2009 proceeds from asset purchases were largely offset by proceeds from asset sales that utilized approximately \$59.4 million as compared to asset purchases less asset sales utilizing approximately \$1.3 billion for the quarter ended March 31, 2008.

Our financing activities used net cash of \$25.2 million during the quarter ended March 31, 2009 and provided net cash of \$1.2 billion for the quarter ended March 31, 2008 primarily from the use of repurchase agreements. We expect to continue to borrow funds in the form of repurchase agreements as well as other types of financing. As of March 31, 2009, we had \$452.5 million outstanding under our repurchase agreement with Annaly collateralized by our RMBS with weighted average borrowing rates of 2.01% and weighted average remaining maturities of 1 day. The RMBS pledged as collateral under the repurchase agreement with Annaly had an estimated fair value of \$532.1 million at March 31, 2009. The interest rates of the repurchase agreements with Annaly are generally indexed to the one-month LIBOR rate and reprice accordingly.

At March 31, 2009 and 2008, the repurchase agreements for RMBS had the following remaining maturities:

March 31, 2009	March 31, 2008
(dollars in thousands)	

Within 30 days	\$559,926	\$598,168
30 to 59 days	-	384,964
60 to 89 days	-	-
90 to 119 days	-	-
Greater than or equal to 120 days	-	24,514
	-----	-----
Total	\$559,926	\$1,007,646
	=====	=====

Increases in short-term interest rates could negatively affect the valuation of our mortgage-related assets, which could limit our borrowing ability or cause our lenders to initiate margin calls. Amounts due upon maturity of our repurchase agreements will be funded primarily through the rollover/reissuance of repurchase agreements and monthly principal and interest payments received on our mortgage-backed securities.

For our short-term (one year or less) and long-term liquidity, which includes investing and compliance with collateralization requirements under our repurchase agreements (if the pledged collateral decreases in value or in the event of margin calls created by prepayments of the pledged collateral), we also rely on the cash flow from investments, primarily monthly principal and interest payments to be received on our RMBS and whole mortgage loans, cash flow from the sale of securities as well as any primary securities offerings authorized by our board of directors.

Based on our current portfolio, leverage ratio and available borrowing arrangements, we believe our assets will be sufficient to enable us to meet anticipated short-term (one year or less) liquidity requirements such as to fund our investment activities, pay fees under our management agreement, fund our distributions to stockholders and pay general corporate expenses. However, an increase in prepayment rates substantially above our expectations could cause a temporary liquidity shortfall due to the timing of the necessary margin calls on the financing arrangements and the actual receipt of the cash related to principal paydowns. If our cash resources are at any time insufficient to satisfy our liquidity requirements, we may have to sell investments or issue debt or additional equity securities in a common stock offering. If required, the sale of RMBS or whole mortgage loans at prices lower than their carrying value would result in losses and reduced income.

Our ability to meet our long-term (greater than one year) liquidity and capital resource requirements will be subject to obtaining additional debt financing and equity capital. Subject to our maintaining our qualification as a REIT, we expect to use a number of sources to finance our investments, including repurchase agreements, warehouse facilities, securitizations, commercial paper and term financing CDOs. Such financing will depend on market conditions for capital raises and for the investment of any proceeds. If we are unable to renew, replace or expand our sources of financing on substantially similar terms, it may have an adverse effect on our business and results of operations. Upon liquidation, holders of our debt securities, if any, and shares of preferred stock, if any, and lenders with respect to other borrowings will receive a distribution of our available assets prior to the holders of our common stock.

We are not required by our investment guidelines to maintain any specific debt-to-equity ratio as we believe the appropriate leverage for the particular assets we are financing depends on the credit quality and risk of those assets. However, our master repurchase agreements require us to maintain certain debt-to-equity ratios. At March 31, 2009, our total debt was approximately \$1.0 billion which represented a debt-to-equity ratio of 2.4:1.

Stockholders' Equity

During the quarter ended March 31, 2009, we declared dividends to common shareholders totaling \$10.6 million, or \$0.06 per share, all of which was paid on April 29, 2009.

On April 15, 2009 we announced the sale of 235,000,000 shares of common stock at \$3.00 per share for estimated proceeds, less the underwriters' discount and offering expenses, of \$674.8 million. Immediately following the sale of these shares Annaly purchased 24,955,752 shares at the same price per share as the public offering, for proceeds of approximately \$74.9 million. In addition, on April 16, 2009 the underwriters exercised the option to purchase up to an additional 35,250,000 shares of common stock to cover over-allotments for proceeds, less the underwriters' discount, of approximately \$101.3 million. These sales were completed on April 21, 2009. In all, we raised net proceeds of approximately \$851.0 in these offerings.

Related Party Transactions

Management Agreement

On November 15, 2007, we entered into a management agreement with FIDAC, pursuant to which FIDAC is entitled to receive a management fee and, in certain

circumstances, a termination fee and reimbursement of certain expenses as described in the management agreement. Such fees and expenses do not have fixed and determinable payments. The management fee is payable quarterly in arrears in an amount equal to 1.50% per annum, calculated quarterly, of our stockholders' equity (as defined in the management agreement). FIDAC uses the proceeds from its management fee in part to pay compensation to its officers and employees who, notwithstanding that certain of them also are our officers, receive no cash compensation directly from us. The management fee will be reduced, but not below zero, by our proportionate share of any CDO management fees FIDAC receives in connection with the CDOs in which we invest, based on the percentage of equity we hold in such CDOs.

Financing Arrangements with Annaly

In March 2008, we entered into a RMBS repurchase agreement with Annaly. This agreement contains customary representations, warranties and covenants contained in such agreements. As of March 31, 2009, we had \$452.5 million outstanding under the agreement with a weighted average borrowing rate of 2.01%.

Restricted Stock Grants

During the quarter ended March 31, 2009, 32,225 shares of restricted stock we had awarded to our Manager's employees vested and 1,267 shares were forfeited or cancelled. We did not grant any incentive awards during the quarter ended March 31, 2009.

At March 31, 2009 there are approximately 1.1 million unvested shares of restricted stock issued to employees of FIDAC. For the quarter ended March 31, 2009, compensation expense less general and administrative costs associated with the amortization of the fair value of the restricted stock totaled \$104 thousand.

Contractual Obligations and Commitments

The following table summarizes our contractual obligations at March 31, 2009.

<TABLE>

</TABLE>

Off-Balance Sheet Arrangements

We do not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes. Further, we have not guaranteed any obligations of unconsolidated entities nor do we have any commitment or intent to provide funding to any such entities. As such, we are not materially exposed to any market, credit, liquidity or financing risk that could arise if we had engaged in such relationships.

Dividends

To qualify as a REIT, we must pay annual dividends to our stockholders of at least 90% of our taxable income, determined without regard to the deduction for dividends paid and excluding any net capital gains. We intend to pay regular quarterly dividends to our stockholders. Before we pay any dividend, whether for U.S. federal income tax purposes or otherwise, which would only be paid out of

available cash to the extent permitted under our warehouse and repurchase facilities, we must first meet both our operating requirements and scheduled debt service on our warehouse lines and other debt payable.

Capital Resources

At March 31, 2009, we had no material commitments for capital expenditures.

Inflation

Virtually all of our assets and liabilities are interest rate sensitive in nature. As a result, interest rates and other factors influence our performance far more so than does inflation. Changes in interest rates do not necessarily correlate with inflation rates or changes in inflation rates. Our financial statements are prepared in accordance with GAAP and our distributions will be determined by our board of directors consistent with our obligation to distribute to our stockholders at least 90% of our REIT taxable income on an annual basis in order to maintain our REIT qualification; in each case, our activities and balance sheet are measured with reference to historical cost and/or fair market value without considering inflation.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The primary components of our market risk are related to credit risk, interest rate risk, prepayment risk, market value risk and real estate risk. While we do not seek to avoid risk completely, we believe the risk can be quantified from historical experience and we seek to actively manage that risk, to earn sufficient compensation to justify taking those risks and to maintain capital levels consistent with the risks we undertake.

Credit Risk

We are subject to credit risk in connection with our investments and face more credit risk on assets we own which are rated below "AAA". The credit risk related to these investments pertains to the ability and willingness of the borrowers to pay, which is assessed before credit is granted or renewed and periodically reviewed throughout the loan or security term. We believe that residual loan credit quality is primarily determined by the borrowers' credit profiles and loan characteristics. FIDAC uses a comprehensive credit review process. FIDAC's analysis of loans includes borrower profiles, as well as valuation and appraisal data. FIDAC uses compensating factors such as liquid assets, low loan to value ratios and job stability in evaluating loans. FIDAC's resources include a proprietary portfolio management system, as well as third party software systems. FIDAC utilizes a third party due diligence firm to perform an independent underwriting review to insure compliance with existing guidelines. FIDAC selects loans for review predicated on risk-based criteria

42

such as loan-to-value, borrower's credit score(s) and loan size. FIDAC also outsources underwriting services to review higher risk loans, either due to borrower credit profiles or collateral valuation issues. In addition to statistical sampling techniques, FIDAC creates adverse credit and valuation samples, which we individually review. FIDAC rejects loans that fail to conform to our standards. FIDAC accepts only those loans which meet our underwriting criteria. Once we own a loan, FIDAC's surveillance process includes ongoing analysis through our proprietary data warehouse and servicer files. Additionally, the non-Agency RMBS and other ABS which we acquire for our portfolio are reviewed by FIDAC to ensure that they satisfy our risk based criteria. FIDAC's review of non-Agency RMBS and other ABS includes utilizing its proprietary portfolio management system. FIDAC's review of non-Agency RMBS and other ABS is based on quantitative and qualitative analysis of the risk-adjusted returns on non-Agency RMBS and other ABS present.

Interest Rate Risk

Interest rate risk is highly sensitive to many factors, including governmental monetary and tax policies, domestic and international economic and political considerations and other factors beyond our control. We are subject to interest rate risk in connection with our investments and our related debt obligations, which are generally repurchase agreements, warehouse facilities, securitization, commercial paper and term financing CDOs. Our repurchase agreements and warehouse facilities may be of limited duration that are periodically refinanced at current market rates. We intend to mitigate this risk through utilization of derivative contracts, primarily interest rate swap agreements.

Interest Rate Effect on Net Interest Income

Our operating results depend, in large part, on differences between the income from our investments and our borrowing costs. Most of our warehouse facilities and repurchase agreements provide financing based on a floating rate of interest calculated on a fixed spread over LIBOR. The fixed spread varies depending on the type of underlying asset which collateralizes the financing. Accordingly, the portion of our portfolio which consists of floating interest

rate assets will be match-funded utilizing our expected sources of short-term financing, while our fixed interest rate assets will not be match-funded. During periods of rising interest rates, the borrowing costs associated with our investments tend to increase while the income earned on our fixed interest rate investments may remain substantially unchanged. This will result in a narrowing of the net interest spread between the related assets and borrowings and may even result in losses. Further, during this portion of the interest rate and credit cycles, defaults could increase and result in credit losses to us, which could adversely affect our liquidity and operating results. Such delinquencies or defaults could also have an adverse effect on the spread between interest-earning assets and interest-bearing liabilities. Hedging techniques are partly based on assumed levels of prepayments of our fixed-rate and hybrid adjustable-rate mortgage loans and RMBS. If prepayments are slower or faster than assumed, the life of the mortgage loans and RMBS will be longer or shorter, which would reduce the effectiveness of any hedging strategies we may use and may cause losses on such transactions. Hedging strategies involving the use of derivative securities are highly complex and may produce volatile returns.

Interest Rate Effects on Fair Value

Another component of interest rate risk is the effect changes in interest rates will have on the fair value of the assets we acquire. We face the risk that the fair value of our assets will increase or decrease at different rates than that of our liabilities, including our hedging instruments. We primarily assess our interest rate risk by estimating the duration of our assets and the duration of our liabilities. Duration essentially measures the market price volatility of financial instruments as interest rates change. We generally calculate duration using various financial models and empirical data. Different models and methodologies can produce different duration numbers for the same securities.

43

It is important to note that the impact of changing interest rates on fair value can change significantly when interest rates change beyond 100 basis points from current levels. Therefore, the volatility in the fair value of our assets could increase significantly when interest rates change beyond 100 basis points. In addition, other factors impact the fair value of our interest rate-sensitive investments and hedging instruments, such as the shape of the yield curve, market expectations as to future interest rate changes and other market conditions. Accordingly, in the event of changes in actual interest rates, the change in the fair value of our assets would likely differ from that shown above and such difference might be material and adverse to our stockholders.

Interest Rate Cap Risk

We also invest in adjustable-rate mortgage loans and RMBS. These are mortgages or RMBS in which the underlying mortgages are typically subject to periodic and lifetime interest rate caps and floors, which limit the amount by which the security's interest yield may change during any given period. However, our borrowing costs pursuant to our financing agreements will not be subject to similar restrictions. Therefore, in a period of increasing interest rates, interest rate costs on our borrowings could increase without limitation by caps, while the interest-rate yields on our adjustable-rate mortgage loans and RMBS would effectively be limited. This problem will be magnified to the extent we acquire adjustable-rate RMBS that are not based on mortgages which are fully indexed. In addition, the mortgages or the underlying mortgages in an RMBS may be subject to periodic payment caps that result in some portion of the interest being deferred and added to the principal outstanding. This could result in our receipt of less cash income on our adjustable-rate mortgages or RMBS than we need in order to pay the interest cost on our related borrowings. These factors could lower our net interest income or cause a net loss during periods of rising interest rates, which would harm our financial condition, cash flows and results of operations.

Interest Rate Mismatch Risk

We fund a substantial portion of our acquisitions of hybrid adjustable-rate mortgages and RMBS with borrowings that, after the effect of hedging, have interest rates based on indices and repricing terms similar to, but of somewhat shorter maturities than, the interest rate indices and repricing terms of the mortgages and RMBS. Thus, in most cases the interest rate indices and repricing terms of our mortgage assets and our funding sources will not be identical, thereby creating an interest rate mismatch between assets and liabilities. Therefore, our cost of funds would likely rise or fall more quickly than would our earnings rate on assets. During periods of changing interest rates, such interest rate mismatches could negatively impact our financial condition, cash flows and results of operations. To mitigate interest rate mismatches, we may utilize the hedging strategies discussed above. Our analysis of risks is based on FIDAC's experience, estimates, models and assumptions. These analyses rely on models which utilize estimates of fair value and interest rate sensitivity. Actual economic conditions or implementation of investment decisions by our management may produce results that differ significantly from the estimates and assumptions used in our models and the projected results shown in this Form

Our profitability and the value of our portfolio (including interest rate swaps) may be adversely affected during any period as a result of changing interest rates. The following table quantifies the potential changes in net interest income and portfolio value should interest rates go up or down 25, 50, and 75 basis points, assuming the yield curves of the rate shocks will be parallel to each other and the current yield curve. All changes in income and value are measured as percentage changes from the projected net interest income and portfolio value at the base interest rate scenario. The base interest rate scenario assumes interest rates at March 31, 2009 and various estimates regarding prepayment and all activities are made at each level of rate shock. Actual results could differ significantly from these estimates.

44

<TABLE>
<CAPTION>
<S>

Change in Interest Rate	<C> Projected Percentage Change in Net Interest Income	<C> Projected Percentage Change in Portfolio Value
-75 Basis Points	2.10%	(2.42%)
-50 Basis Points	1.71%	(2.86%)
-25 Basis Points	1.31%	(3.28%)
Base Interest Rate	-	-
+25 Basis Points	(0.04%)	(4.11%)
+50 Basis Points	0.10%	(4.52%)
+75 Basis Points	0.24%	(4.91%)

</TABLE>

Prepayment Risk

As we receive prepayments of principal on these investments, premiums paid on such investments will be amortized against interest income. In general, an increase in prepayment rates will accelerate the amortization of purchase premiums, thereby reducing the interest income earned on the investments. Conversely, discounts on such investments are accreted into interest income. In general, an increase in prepayment rates will accelerate the accretion of purchase discounts, thereby increasing the interest income earned on the investments.

Extension Risk

FIDAC computes the projected weighted-average life of our investments based on assumptions regarding the rate at which the borrowers will prepay the underlying mortgages. In general, when fixed-rate or hybrid adjustable-rate mortgage loans or RMBS are acquired with borrowings, we may, but are not required to, enter into an interest rate swap agreement or other hedging instrument that effectively fixes our borrowing costs for a period close to the anticipated average life of the fixed-rate portion of the related assets. This strategy is designed to protect us from rising interest rates because the borrowing costs are fixed for the duration of the fixed-rate portion of the related assets. However, if prepayment rates decrease in a rising interest rate environment, the life of the fixed-rate portion of the related assets could extend beyond the term of the swap agreement or other hedging instrument. This could have a negative impact on our results from operations, as borrowing costs would no longer be fixed after the end of the hedging instrument while the income earned on the hybrid adjustable-rate assets would remain fixed. This situation may also cause the market value of our hybrid adjustable-rate assets to decline, with little or no offsetting gain from the related hedging transactions. In extreme situations, we may be forced to sell assets to maintain adequate liquidity, which could cause us to incur losses.

Market Risk

Market Value Risk

Our available-for-sale securities are reflected at their estimated fair value with unrealized gains and losses excluded from earnings and reported in other comprehensive income pursuant to SFAS No. 115, Accounting for Certain Investments in Debt and Equity Securities. The estimated fair value of these securities fluctuates primarily due to changes in interest rates, prepayment speeds, market liquidity, credit quality, and other factors. Generally, in a rising interest rate environment, the estimated fair value of these securities would be expected to decrease; conversely, in a decreasing interest rate environment, the estimated fair value of these securities would be expected to increase. As market volatility increases or liquidity decreases, the fair value of our investments may be adversely impacted. If we are unable to readily obtain independent pricing to validate our estimated fair value of securities in the portfolio, the fair value gains or losses recorded in other comprehensive income may be adversely affected.

Real Estate Market Risk

We own assets secured by real property and may own real property directly in

the future. Residential property values are subject to volatility and may be affected adversely by a number of factors, including, but not limited to,

national, regional and local economic conditions (which may be adversely affected by industry slowdowns and other factors); local real estate conditions (such as an oversupply of housing); changes or continued weakness in specific industry segments; construction quality, age and design; demographic factors; and retroactive changes to building or similar codes. In addition, decreases in property values reduce the value of the collateral and the potential proceeds available to a borrower to repay our loans, which could also cause us to suffer losses.

Risk Management

To the extent consistent with maintaining our REIT status, we seek to manage risk exposure to protect our portfolio of residential mortgage loans, RMBS, and other assets and related debt against the effects of major interest rate changes. We generally seek to manage our risk by:

- o monitoring and adjusting, if necessary, the reset index and interest rate related to our RMBS and our financings;
- o attempting to structure our financing agreements to have a range of different maturities, terms, amortizations and interest rate adjustment periods;
- o using derivatives, financial futures, swaps, options, caps, floors and forward sales to adjust the interest rate sensitivity of our investments and our borrowings;
- o using securitization financing to lower average cost of funds relative to short-term financing vehicles further allowing us to receive the benefit of attractive terms for an extended period of time in contrast to short term financing and maturity dates of the investments included in the securitization; and
- o actively managing, on an aggregate basis, the interest rate indices, interest rate adjustment periods, and gross reset margins of our investments and the interest rate indices and adjustment periods of our financings.

Our efforts to manage our assets and liabilities are concerned with the timing and magnitude of the repricing of assets and liabilities. We attempt to control risks associated with interest rate movements. Methods for evaluating interest rate risk include an analysis of our interest rate sensitivity "gap", which is the difference between interest-earning assets and interest-bearing liabilities maturing or repricing within a given time period. A gap is considered positive when the amount of interest-rate sensitive assets exceeds the amount of interest-rate sensitive liabilities. A gap is considered negative when the amount of interest-rate sensitive liabilities exceeds interest-rate sensitive assets. During a period of rising interest rates, a negative gap would tend to adversely affect net interest income, while a positive gap would tend to result in an increase in net interest income. During a period of falling interest rates, a negative gap would tend to result in an increase in net interest income, while a positive gap would tend to affect net interest income adversely. Because different types of assets and liabilities with the same or similar maturities may react differently to changes in overall market rates or conditions, changes in interest rates may affect net interest income positively or negatively even if an institution were perfectly matched in each maturity category.

The following table sets forth the estimated maturity or repricing of our interest-earning assets and interest-bearing liabilities at March 31, 2009. The amounts of assets and liabilities shown within a particular period were determined in accordance with the contractual terms of the assets and liabilities, except adjustable-rate loans, and securities are included in the period in which their interest rates are first scheduled to adjust and not in the period in which they mature and does include the effect of the interest rate swaps. The interest rate sensitivity of our assets and liabilities in the table could vary substantially if based on actual prepayment experience.

<TABLE> <CAPTION> <S> <C>	<C>	<C>	<C>	<C>

=====				

</TABLE>

Our analysis of risks is based on FIDAC's experience, estimates, models and assumptions. These analyses rely on models which utilize estimates of fair value and interest rate sensitivity. Actual economic conditions or implementation of investment decisions by FIDAC may produce results that differ significantly from the estimates and assumptions used in our models and the projected results shown in the above tables and in this report. These analyses contain certain forward-looking statements and are subject to the safe harbor statement set forth under the heading, "Special Note Regarding Forward-Looking Statements."

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Our management, including our Chief Executive Officer, or CEO, and Chief Financial Officer, or CFO, reviewed and evaluated the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rule 13a-15(e) and 15d-15(e) of the Securities Exchange Act) as of the end of the period covered by this quarterly report. Based on that review and evaluation, the CEO and CFO have concluded that our current disclosure controls and procedures, as designed and implemented, (1) were effective in ensuring that information regarding the Company and its subsidiaries is made known to our management, including our CEO and CFO, as appropriate to allow timely decisions regarding required disclosure and (2) were effective in providing reasonable assurance that information the Company must disclose in its periodic reports under the Securities Exchange Act is recorded, processed, summarized and reported within the time periods prescribed by the SEC's rules and forms.

Changes in Internal Controls

There have been no changes in our "internal control over financial reporting" (as defined in Rule 13a-15(f) under the Securities Exchange Act) that occurred during the period covered by this quarterly report that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

47

PART II. OTHER INFORMATION

Item 1. LEGAL PROCEEDINGS

From time to time, we may be involved in various claims and legal actions arising in the ordinary course of business. In the opinion of management, the ultimate disposition of these matters will not have a material adverse effect on our consolidated financial statements.

Item 1A. RISK FACTORS

In addition to the other information set forth in this report, you should carefully consider the factors discussed in Part I, "Item 1A. Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2008, which could materially affect our business, financial condition or future results. The information presented below updates and should be read in conjunction with the risk factors and information disclosed in that Form 10-K.

MORTGAGE LOAN MODIFICATION PROGRAMS, FUTURE LEGISLATIVE ACTION AND CHANGES IN THE REQUIREMENTS NECESSARY TO QUALIFY FOR REFINANCING A MORTGAGE WITH FANNIE MAE, FREDDIE MAC OR GINNIE MAE MAY ADVERSELY AFFECT THE VALUE OF, AND THE RETURNS ON, THE ASSETS IN WHICH WE INVEST.

During the second half of 2008 and in early 2009, the U.S. government, through the Federal Housing Administration, or FHA, and the FDIC, commenced implementation of programs designed to provide homeowners with assistance in avoiding residential mortgage loan foreclosures including the Hope for Homeowners Act of 2008, which allows certain distressed borrowers to refinance their mortgages into FHA-insured loans. The programs may also involve, among other things, the modification of mortgage loans to reduce the principal amount of the loans or the rate of interest payable on the loans, or to extend the payment terms of the loans. Members of the U.S. Congress have indicated support for additional legislative relief for homeowners, including an amendment of the bankruptcy laws to permit the modification of mortgage loans in bankruptcy proceedings. These loan modification programs, future legislative or regulatory actions, including amendments to the bankruptcy laws, that result in the modification of outstanding mortgage loans, as well as changes in the requirements necessary to qualify for refinancing a mortgage with Fannie Mae, Freddie Mac or Ginnie Mae may adversely affect the value of, and the returns on, the RMBS, residential mortgage loans, real estate-related securities and various other asset classes in which we invest. Depending on whether or not we purchased an instrument at a premium or discount, the yield we receive may be positively or negatively impacted by any modification.

THE CONSERVATORSHIP OF FANNIE MAE AND FREDDIE MAC AND RELATED EFFORTS, ALONG WITH ANY CHANGES IN LAWS AND REGULATIONS AFFECTING THE RELATIONSHIP BETWEEN FANNIE MAE AND FREDDIE MAC AND THE FEDERAL GOVERNMENT, MAY ADVERSELY AFFECT OUR BUSINESS.

Due to increased market concerns about Fannie Mae and Freddie Mac's ability to withstand future credit losses associated with securities held in their investment portfolios, and on which they provide guarantees, without the direct support of the federal government, on July 30, 2008, the government passed the Housing and Economic Recovery Act of 2008, or the HERA. Among other things, the HERA established the Federal Housing Finance Agency, or FHFA, which has broad regulatory powers over Fannie Mae and Freddie Mac. On September 7, 2008, the FHFA placed Fannie Mae and Freddie Mac into conservatorship and, together with the Treasury, established a program designed to boost investor confidence in Fannie Mae's and Freddie Mac's debt and mortgage-backed securities. As the conservator of Fannie Mae and Freddie Mac, the FHFA controls and directs the operations of Fannie Mae and Freddie Mac and may (1) take over the assets of and operate Fannie Mae and Freddie Mac with all the powers of the shareholders, the directors and the officers of Fannie Mae and Freddie Mac and conduct all business of Fannie Mae and Freddie Mac; (2) collect all obligations and money due to Fannie Mae and Freddie Mac; (3) perform all functions of Fannie Mae and Freddie Mac which are consistent with the conservator's appointment; (4) preserve and conserve the assets and property of Fannie Mae and Freddie Mac; and (5) contract for assistance in fulfilling any function, activity, action or duty

48

of the conservator. A primary focus of this new legislation is to increase the availability of mortgage financing by allowing Fannie Mae and Freddie Mac to continue to grow their guarantee business without limit, while limiting net purchases of Agency RMBS to a modest amount through the end of 2009. It is currently planned for Fannie Mae and Freddie Mac to reduce gradually their Agency RMBS portfolios beginning in 2010.

In addition to FHFA becoming the conservator of Fannie Mae and Freddie Mac, the Treasury has taken three additional actions: (i) the Treasury and FHFA have entered into preferred stock purchase agreements between the Treasury and Fannie Mae and Freddie Mac pursuant to which the Treasury will ensure that each of Fannie Mae and Freddie Mac maintains a positive net worth; (ii) the Treasury has established a new secured lending credit facility which will be available to Fannie Mae, Freddie Mac and the Federal Home Loan Banks, which is intended to serve as a liquidity backstop, which will be available until December 2009; and (iii) the Treasury has initiated a temporary program to purchase Agency RMBS issued by Fannie Mae and Freddie Mac.

Although the Treasury has committed capital to Fannie Mae and Freddie Mac, there can be no assurance that these actions will be adequate for their needs. If these actions are inadequate, Fannie Mae and Freddie Mac could continue to suffer losses and could fail to honor their guarantees and other obligations. The future roles of Fannie Mae and Freddie Mac could be significantly reduced and the nature of their guarantees could be considerably limited relative to historical measurements. Any changes to the nature of the guarantees provided by Fannie Mae and Freddie Mac could redefine what constitutes an Agency RMBS and could have broad adverse market implications.

On November 25, 2008, the Federal Reserve announced that it will initiate a program to purchase \$100 billion in direct obligations of Fannie Mae, Freddie Mac and the Federal Home Loan Banks and \$500 billion in Agency RMBS backed by

Fannie Mae, Freddie Mac and Ginnie Mae. The Federal Reserve stated that its actions are intended to reduce the cost and increase the availability of credit for the purchase of houses, and are meant to support housing markets and foster improved conditions in financial markets more generally. The purchases of direct obligations began during the first week of December 2008, and the purchases of Agency RMBS began in early January 2009. The Federal Reserve has announced an expansion of this program to purchase another \$750 million in Agency RMBS. The Federal Reserve's program to purchase Agency RMBS could cause an increase in the price of Agency RMBS, which could help the value of assets in our portfolio but may negatively impact the net interest margin with respect to new Agency RMBS we may purchase.

The size and timing of the federal government's Agency RMBS purchase program is subject to the discretion of the Treasury and the Federal Reserve. Purchases under these programs have already begun, but there is no certainty that they will continue. It is possible that a change in the Treasury's and the Federal Reserve's commitment to purchase Agency RMBS in the future could negatively affect the pricing of Agency RMBS that we seek to acquire. Given the highly fluid and evolving nature of events, it is unclear how our business may be impacted. Further activity of the U.S. Government or market response to developments at Fannie Mae and Freddie Mac could adversely impact our business.

THE ACTIONS OF THE U.S. GOVERNMENT, FEDERAL RESERVE AND TREASURY, INCLUDING THE ESTABLISHMENT OF THE TALF AND THE PPIP, MAY ADVERSELY AFFECT OUR BUSINESS.

The TALF was first announced by the Treasury on November 25, 2008, and has been expanded in size and scope since its initial announcement. Under the TALF, the Federal Reserve Bank of New York makes non-recourse loans to borrowers to fund their purchase of eligible assets, currently certain asset backed securities but not RMBS or CMBS. Currently, TALF loans: have three-year terms, have interest due monthly, are exempt from mark-to-market rules and margin calls related to a decrease in the underlying collateral value, are pre-payable in whole or in part, and prohibit the substitution of any underlying collateral. It is expected that the TALF loans will require that any payments of principal on the underlying collateral reduce the principal amount of the TALF loan pro rata

49

based upon the original loan-to-value ratio. The nature of the eligible assets has been expanded several times. The Treasury has stated that through its expansion of the TALF, non-recourse loans will be made available to investors to certain fund purchases of legacy securitization assets. Eligible assets are expected to include certain non-Agency RMBS that were originally rated AAA and CMBS and ABS that are rated AAA. The eligibility criteria and terms of these loans have not yet been determined. Additionally, certain terms of the TALF loans may be modified.

On March 23, 2009, the Treasury in conjunction with the FDIC, and the Federal Reserve, announced the PPIP. The PPIP aims to recreate a market for specific illiquid residential and commercial loans and securities through a number of joint public and private investment funds. The PPIP is designed to draw new private capital into the market for these securities and loans by providing government equity co-investment and attractive public financing. The PPIP is expected to be \$500 billion to \$1 trillion in size and has two primary components: a loan purchase program and a securities purchase program.

These programs are still in early stages of development, and it is not possible to predict how the TALF, the PPIP, or other recent U.S. government actions will impact the financial markets, including current significant levels of volatility, or our current or future investments. To the extent the market does not respond favorably to these initiatives or they do not function as intended, our business may not receive the anticipated positive impact from this legislation. We are currently actively evaluating these programs to determine if they are appropriate in light of our investment strategy. However, we can provide no assurance that we will be eligible to use these programs or, if eligible, will be able to utilize them successfully.

In addition, the U.S. government, Federal Reserve, Treasury and other governmental and regulatory bodies have taken or are considering taking other actions to address the financial crisis. We cannot predict whether or when such actions may occur, and such actions could have a dramatic impact on our business, results of operations and financial condition.

Item 6. EXHIBITS

Exhibits:

The exhibits required by this item are set forth on the Exhibit Index attached hereto

EXHIBIT INDEX

Exhibit Description
Number

- 3.1 Articles of Amendment and Restatement of Chimera Investment Corporation (filed as Exhibit 3.1 to the Company's Registration Statement on Amendment No. 1 to Form S-11 (File No. 333-145525) filed on September 27, 2007 and incorporated herein by reference)
- 3.2 Amended and Restated Bylaws of Chimera Investment Corporation (filed as Exhibit 3.2 to the Company's Registration Statement on Amendment No. 2 to Form S-11 (File No. 333-145525) filed on November 5, 2007 and incorporated herein by reference)
- 4.1 Specimen Common Stock Certificate of Chimera Investment Corporation (filed as Exhibit 4.1 to the Company's Registration Statement on Amendment No. 1 to Form S-11 (File No. 333-145525) filed on September 27, 2007 and incorporated herein by reference)
- 31.1 Certification of Matthew Lambiase, Chief Executive Officer and President of the Registrant, pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
- 31.2 Certification of A. Alexandra Denahan, Chief Financial Officer of the Registrant, pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
- 32.1 Certification of Matthew Lambiase, Chief Executive Officer and President of the Registrant, pursuant to 18 U.S.C. Section 1350 as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
- 32.2 Certification of A. Alexandra Denahan, Chief Financial Officer of the Registrant, pursuant to 18 U.S.C. Section 1350 as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

CERTIFICATIONS

I, Matthew Lambiase, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Chimera Investment Corporation;
2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f) for the registrant and have:
 - a. Designed such disclosure controls and procedures or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - d. Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - a. All significant deficiencies and material weaknesses in the design or operation of internal controls over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
